n

Navigation: the bar becomes a pill

Prototype of the studiokeffi.com navigation in our brand kit. At the top the nav is a full-width bar over the footage: the full-colour logo left, links in a hairline pill in the middle, the red 'Kirim brief-mu' (white text) right. As soon as you scroll, the bar contracts from both sides into one compact ink pill that hugs logo, links and button, the logo turns white as its ground fades in, and the links dip out and back. Scroll back to the top and it opens out again. On the phone the bar tightens into a full-width floating pill with the logo and 'Menu'; 'Menu' grows the pill into a full panel: large links, the latest work, the button and contacts, all on one left edge.

Open: ink pill

Slow motion

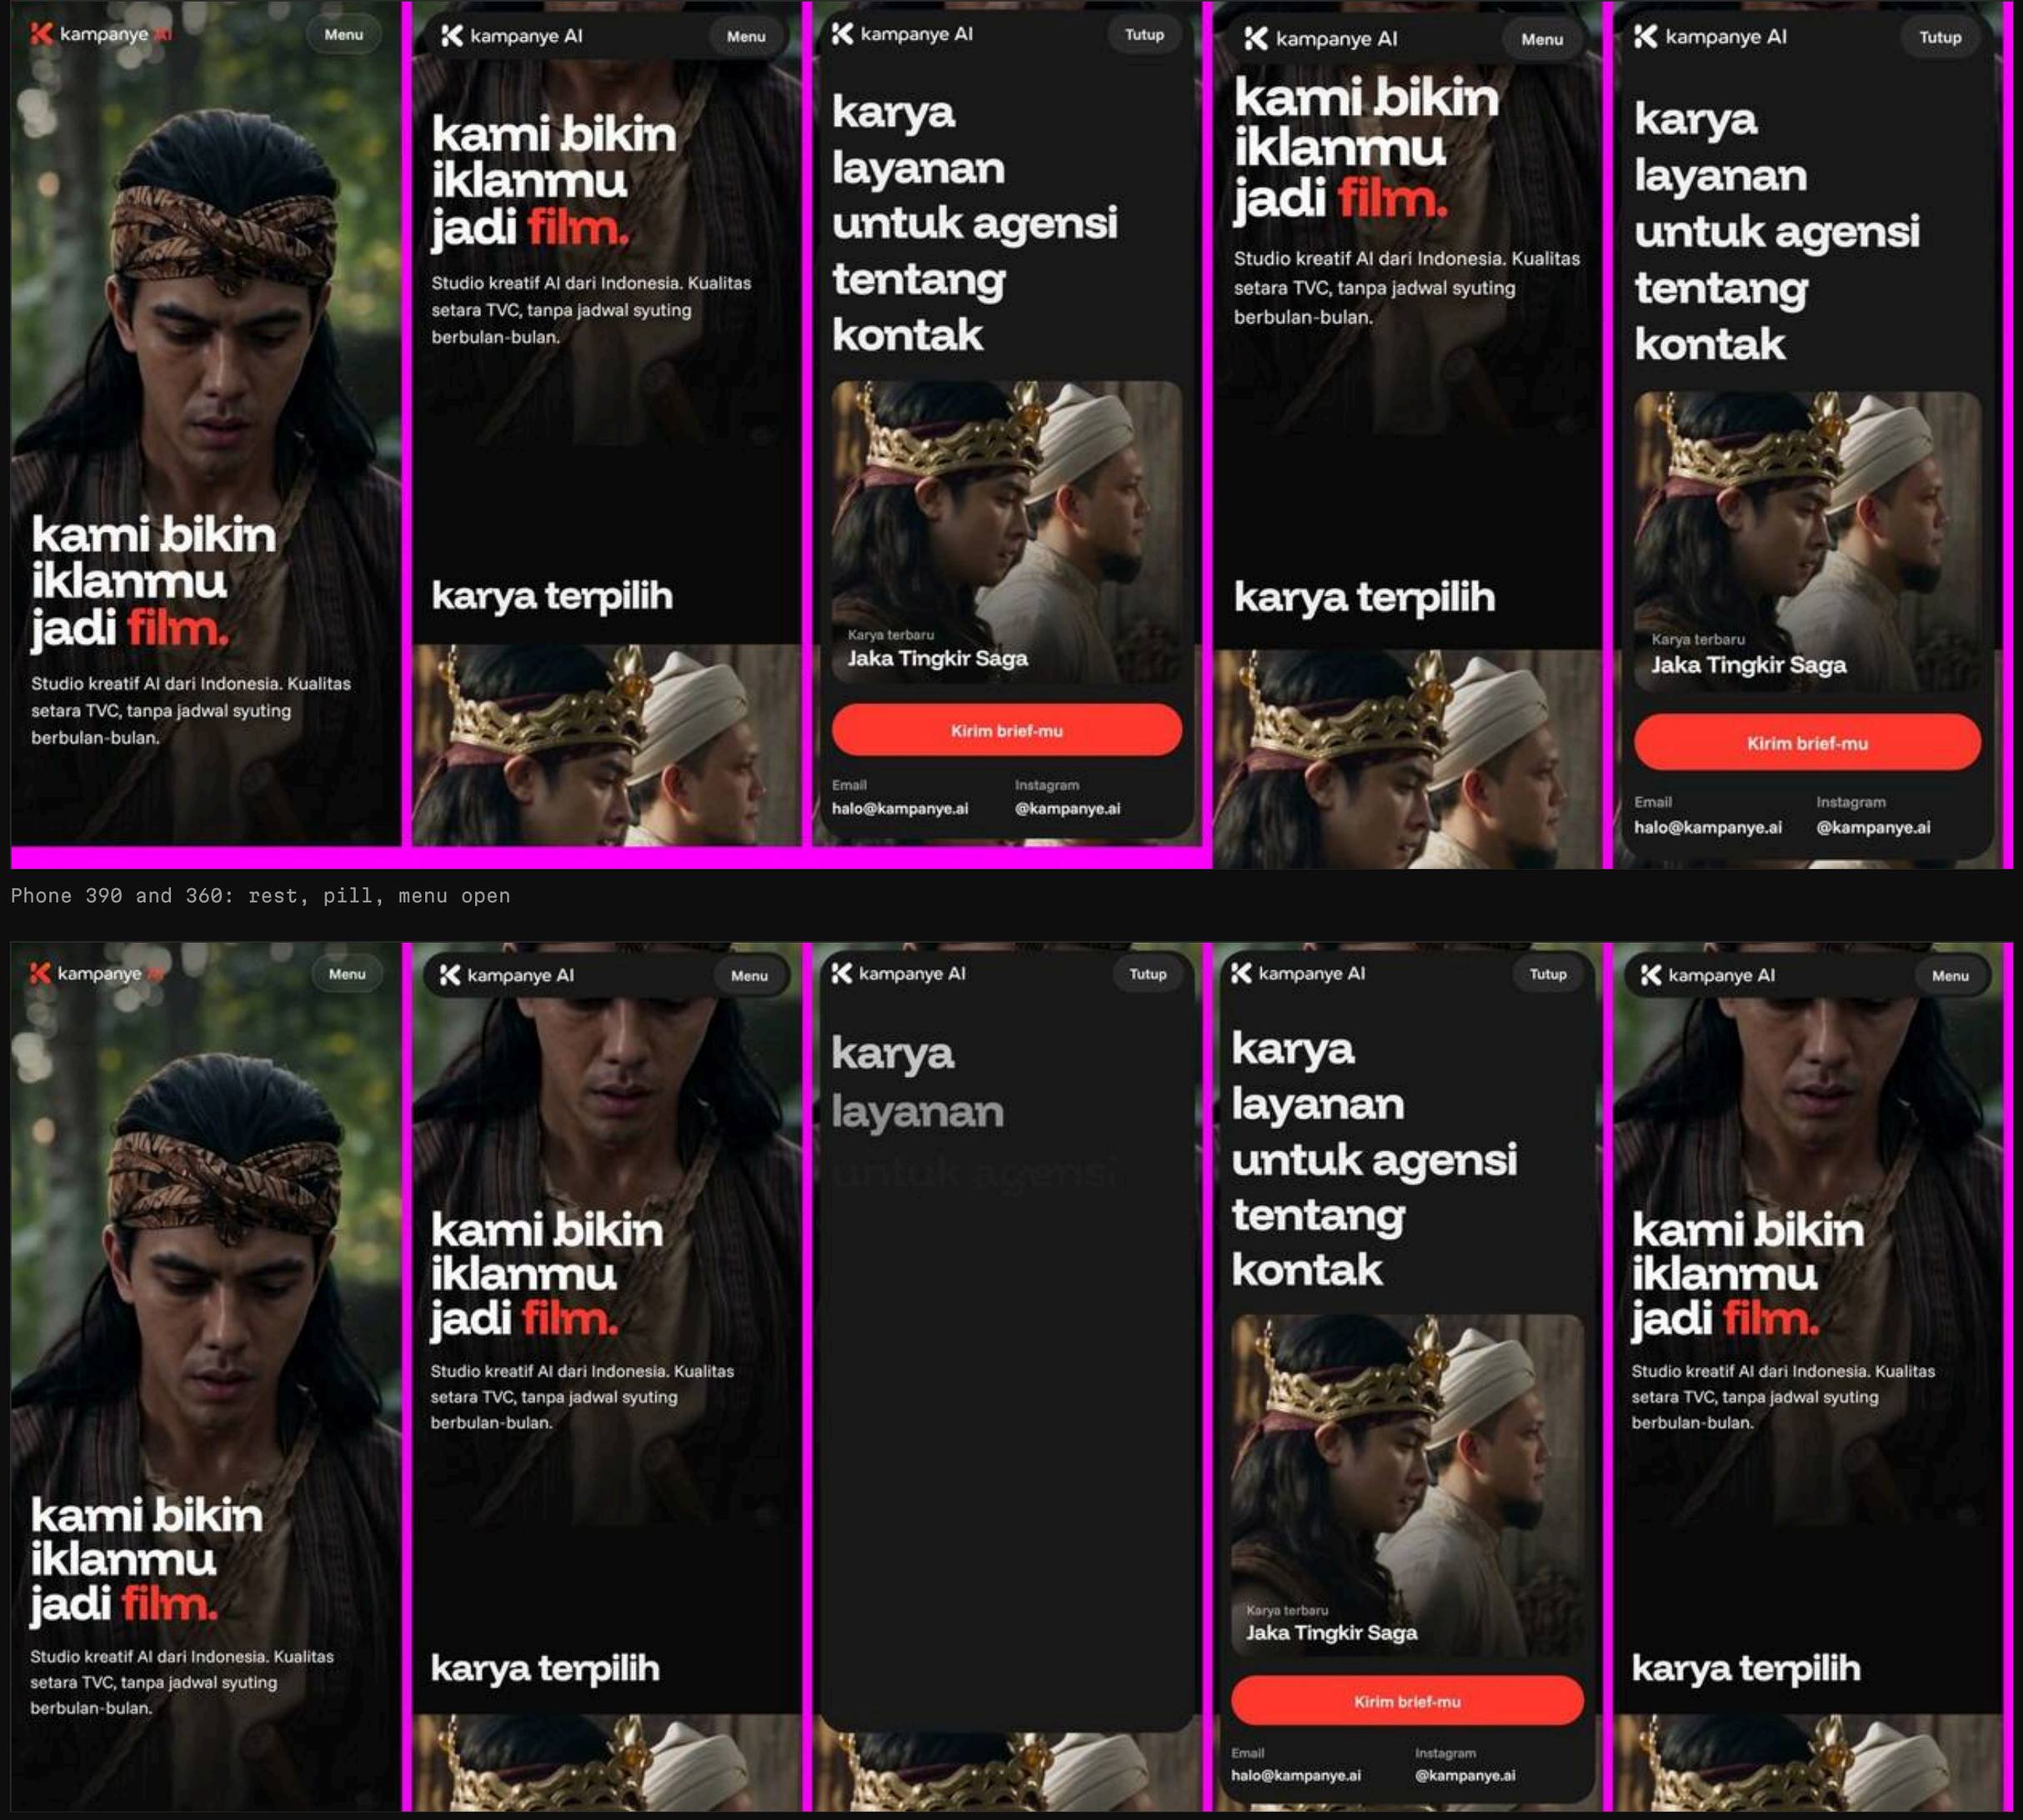
d-ink-9-back.png

Rest (full-colour logo), the morph in slow motion (the logo turns white), the pill over the red card and over paper, back to rest



Phone 390 and 360: rest, pill, menu open

Phone: rest, pill, the pill growing into the menu panel, open, closed

Measured: about 0.56 s per morph with a strong ease-out, matched to the reference frame by frame; no dropped frames on our PC, phone profile included (not yet on the real Infinix). Only transform, opacity and clip-path animate. Reduced motion switches instantly.

Brand fonts: pick by eye

Before the brand kit and the website: the font that carries the new look (the Genjutsu reel: dark footage, huge lowercase bold sans, one word in red). Ten free fonts, each rendered as the same real material: an Instagram frame, a red card, the website hero, a clean process panel, a deck slide, the logo next to it, and a short 9:16 reel. All free with an open licence (OFL), so the files can go to anyone's agent. The reel itself uses Helvetica Neue (paid); Switzer is shown only as the closest look and can't be shared outside staff.

03 Newsreader (poster + hero film tile, sans = Schibsted Grotesk)

Small serif for film titles

Deck slide with body text

Designer's ranking (you pick by eye): 1 Schibsted Grotesk: dense, punchy lowercase, goes to Black, works as body text. 2 Host Grotesk: rounder, sits best next to the logo, stops at ExtraBold. 3 Inter Display: closest to the reel, but every AI tool's default. Wildcard: Mona Sans, the hardest hitting, and its width can animate. Film-title serif: Instrument Serif (Bodoni Moda as runner-up).

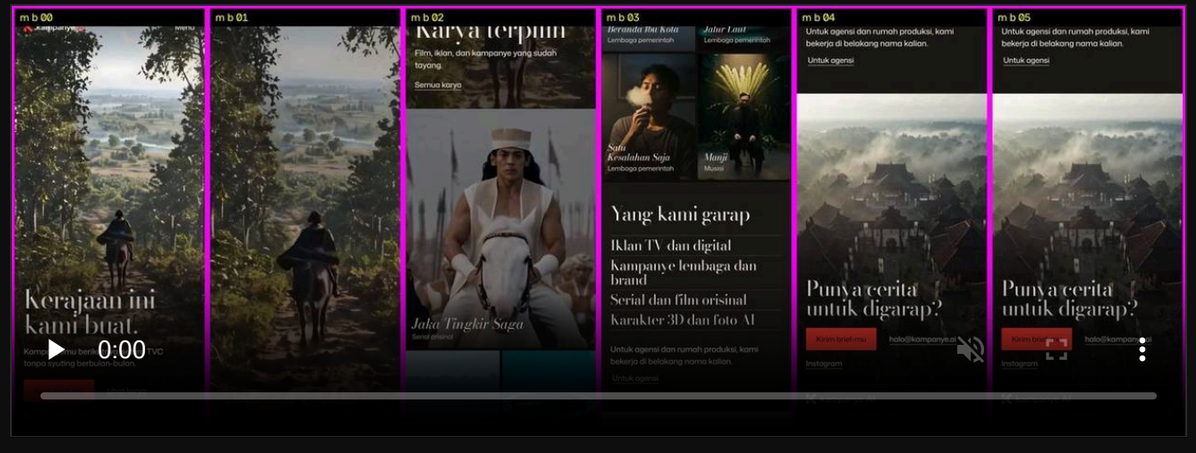
m

Masuk ke dalam gambar: draft 2, full-bleed and dense

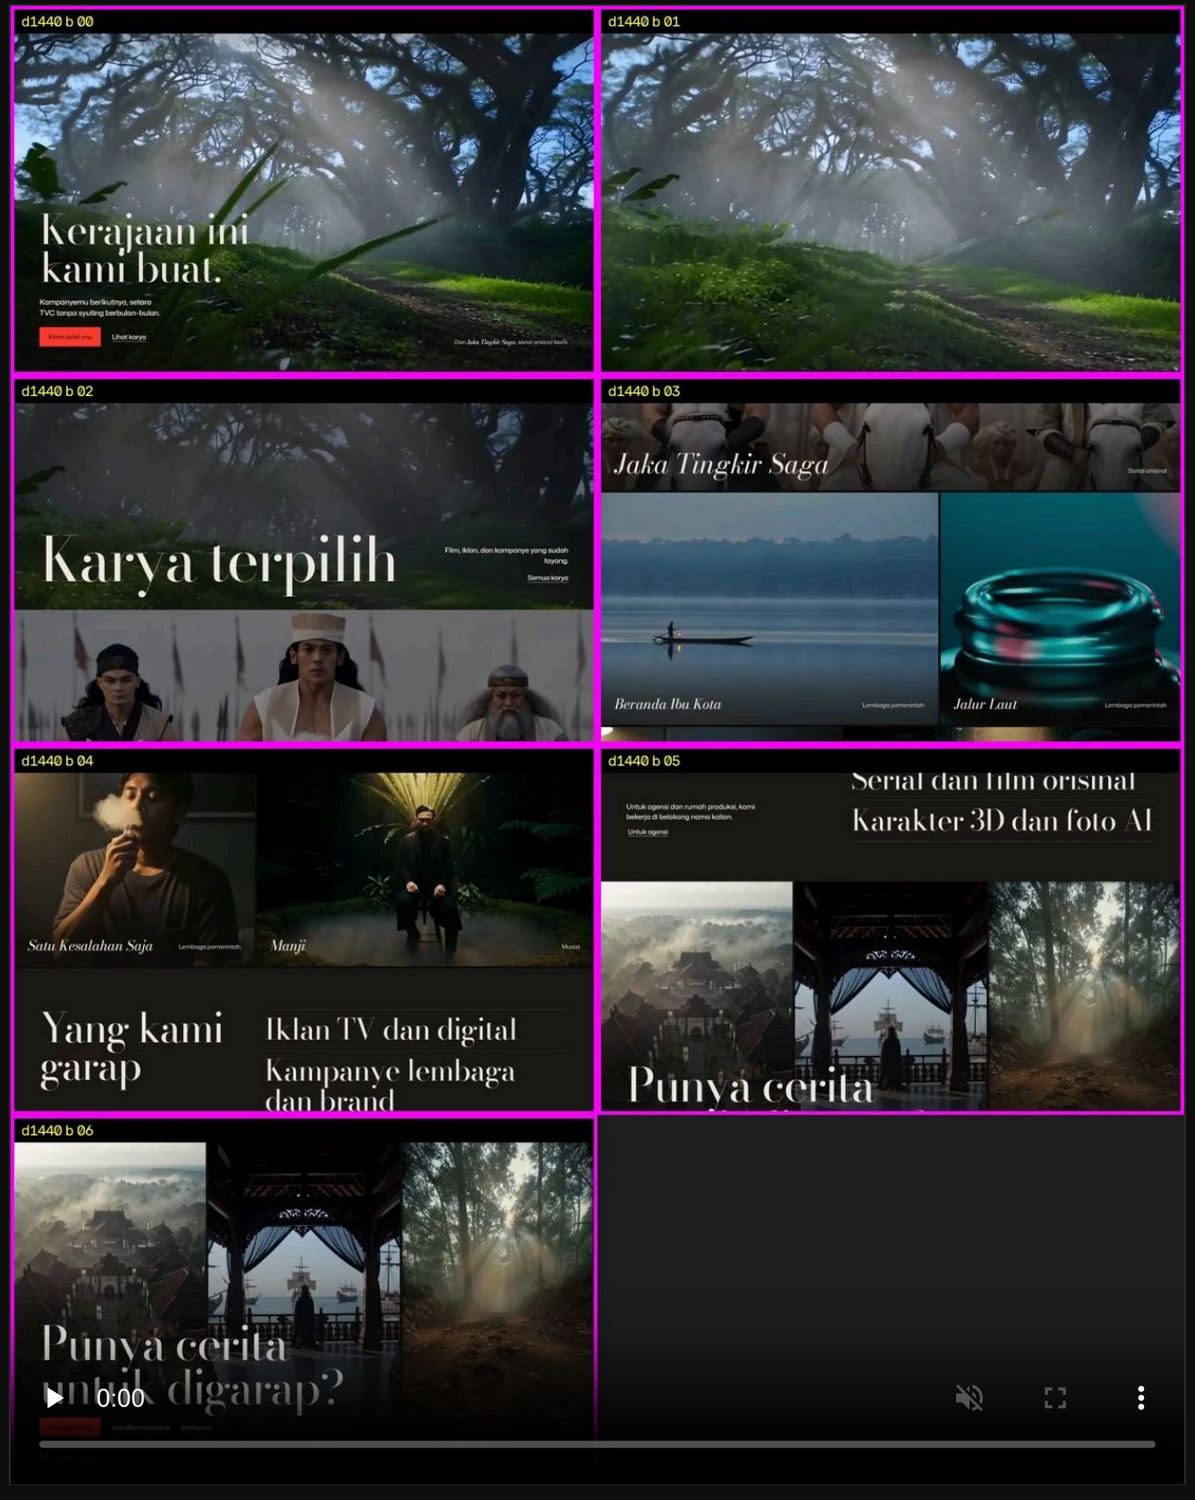
Your feedback on draft 1 was too much empty space: the black slab beside the picture on desktop. Now the picture fills every screen edge to edge, with the type laid on it. On arrival, dawn light rises through the layers; as you scroll, the camera pushes into the scene, the nearest leaves pass the lens, and Karya terpilih rises over it as a tight poster wall. Image layers, no video. Two free stand-ins for the desktop picture: B (default) is a wide trailer frame of giant rain trees, A is your rider frame widened to fit. Open both on a laptop, and the page on your phone.

Open: desktop picture B (trees)

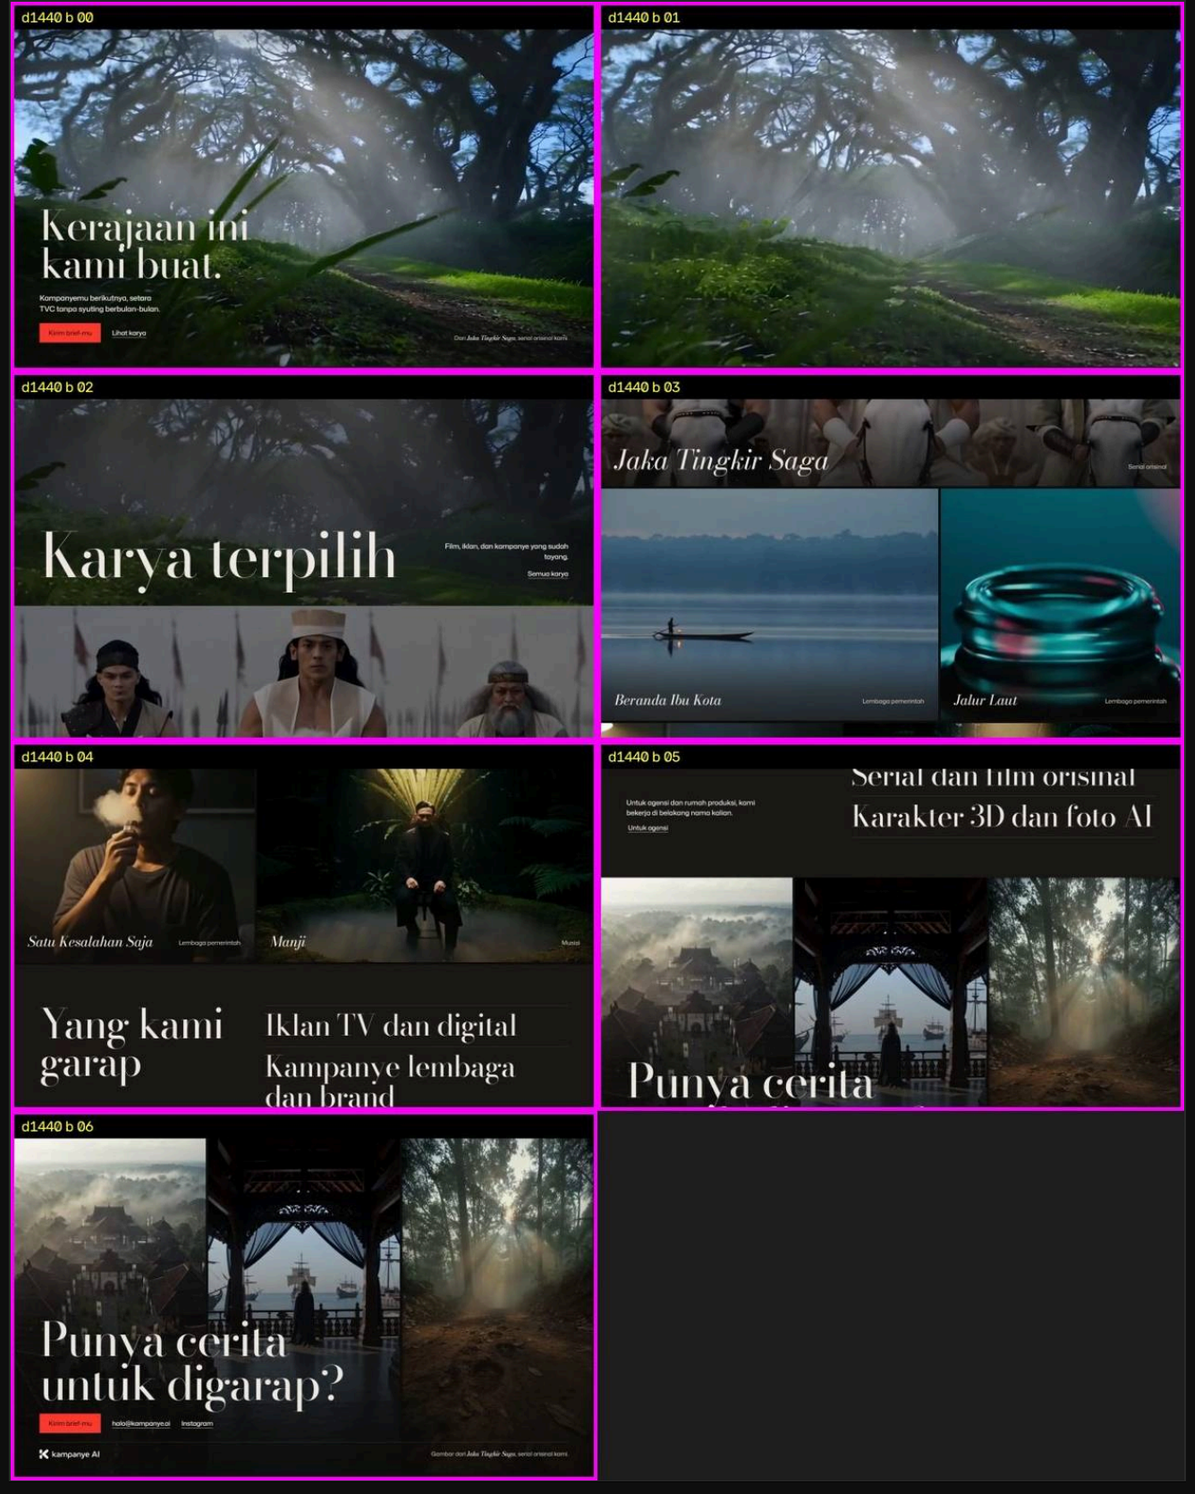
Picture A (rider, widened)



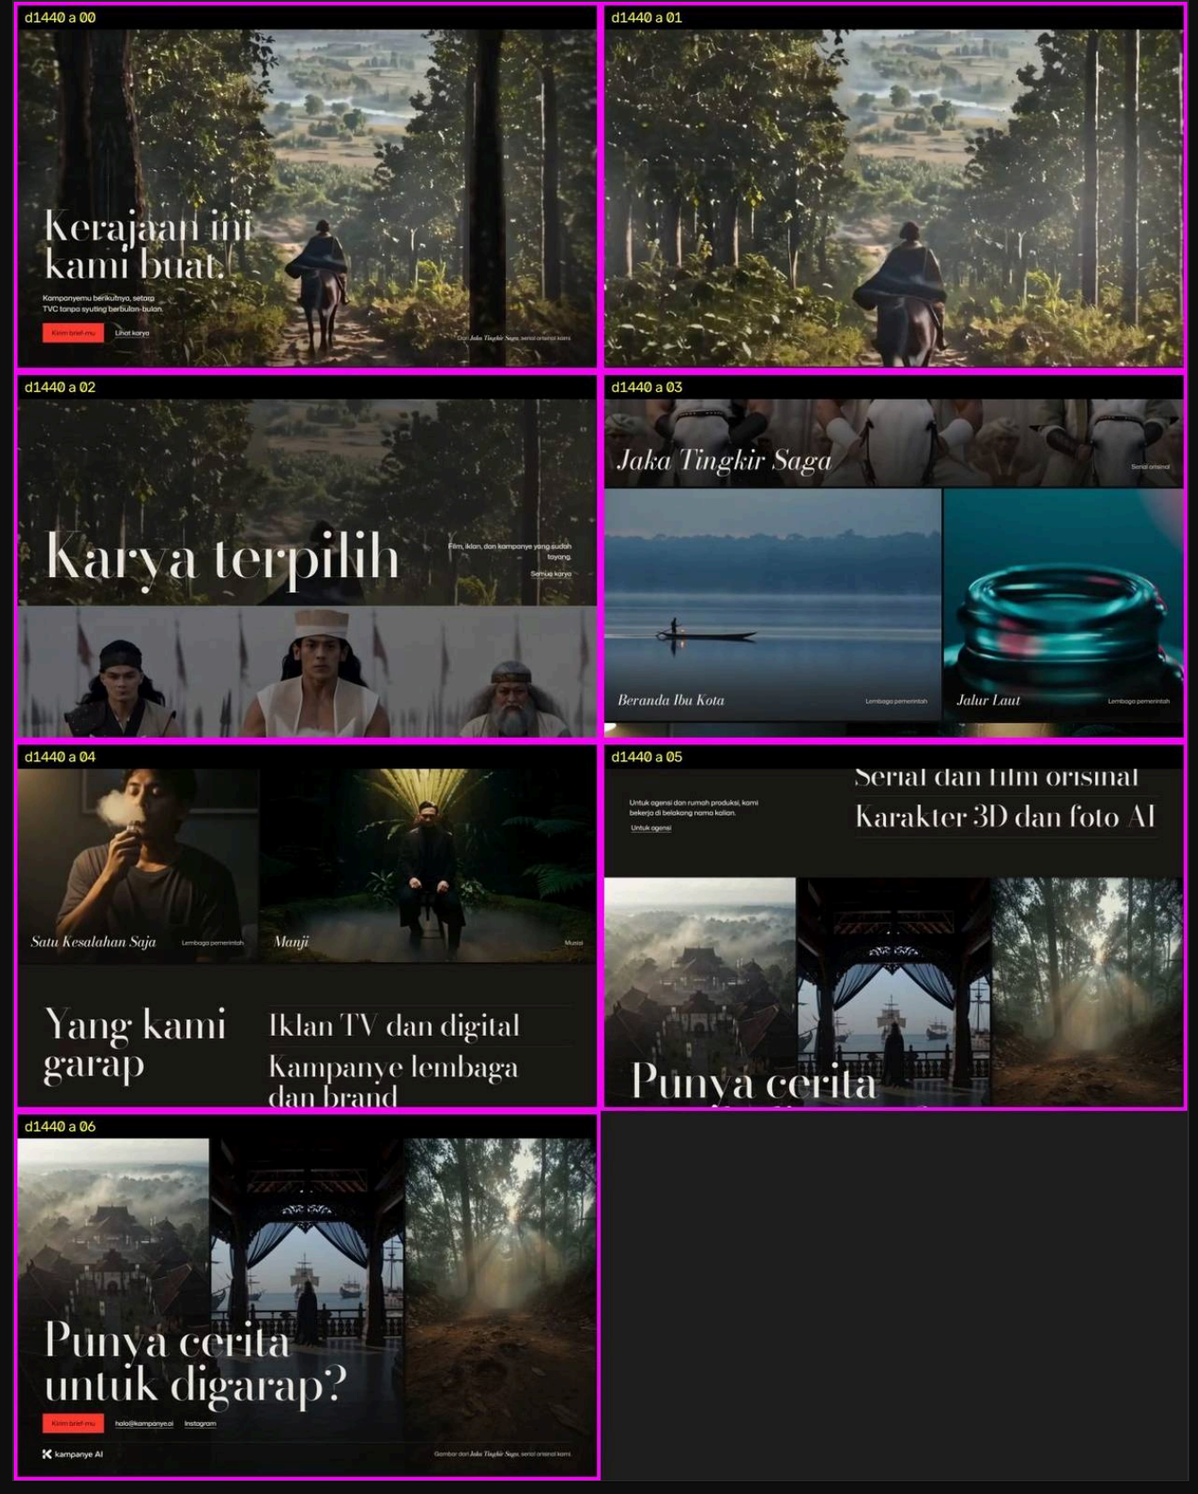
Screen recording of the working mock (headless browser)



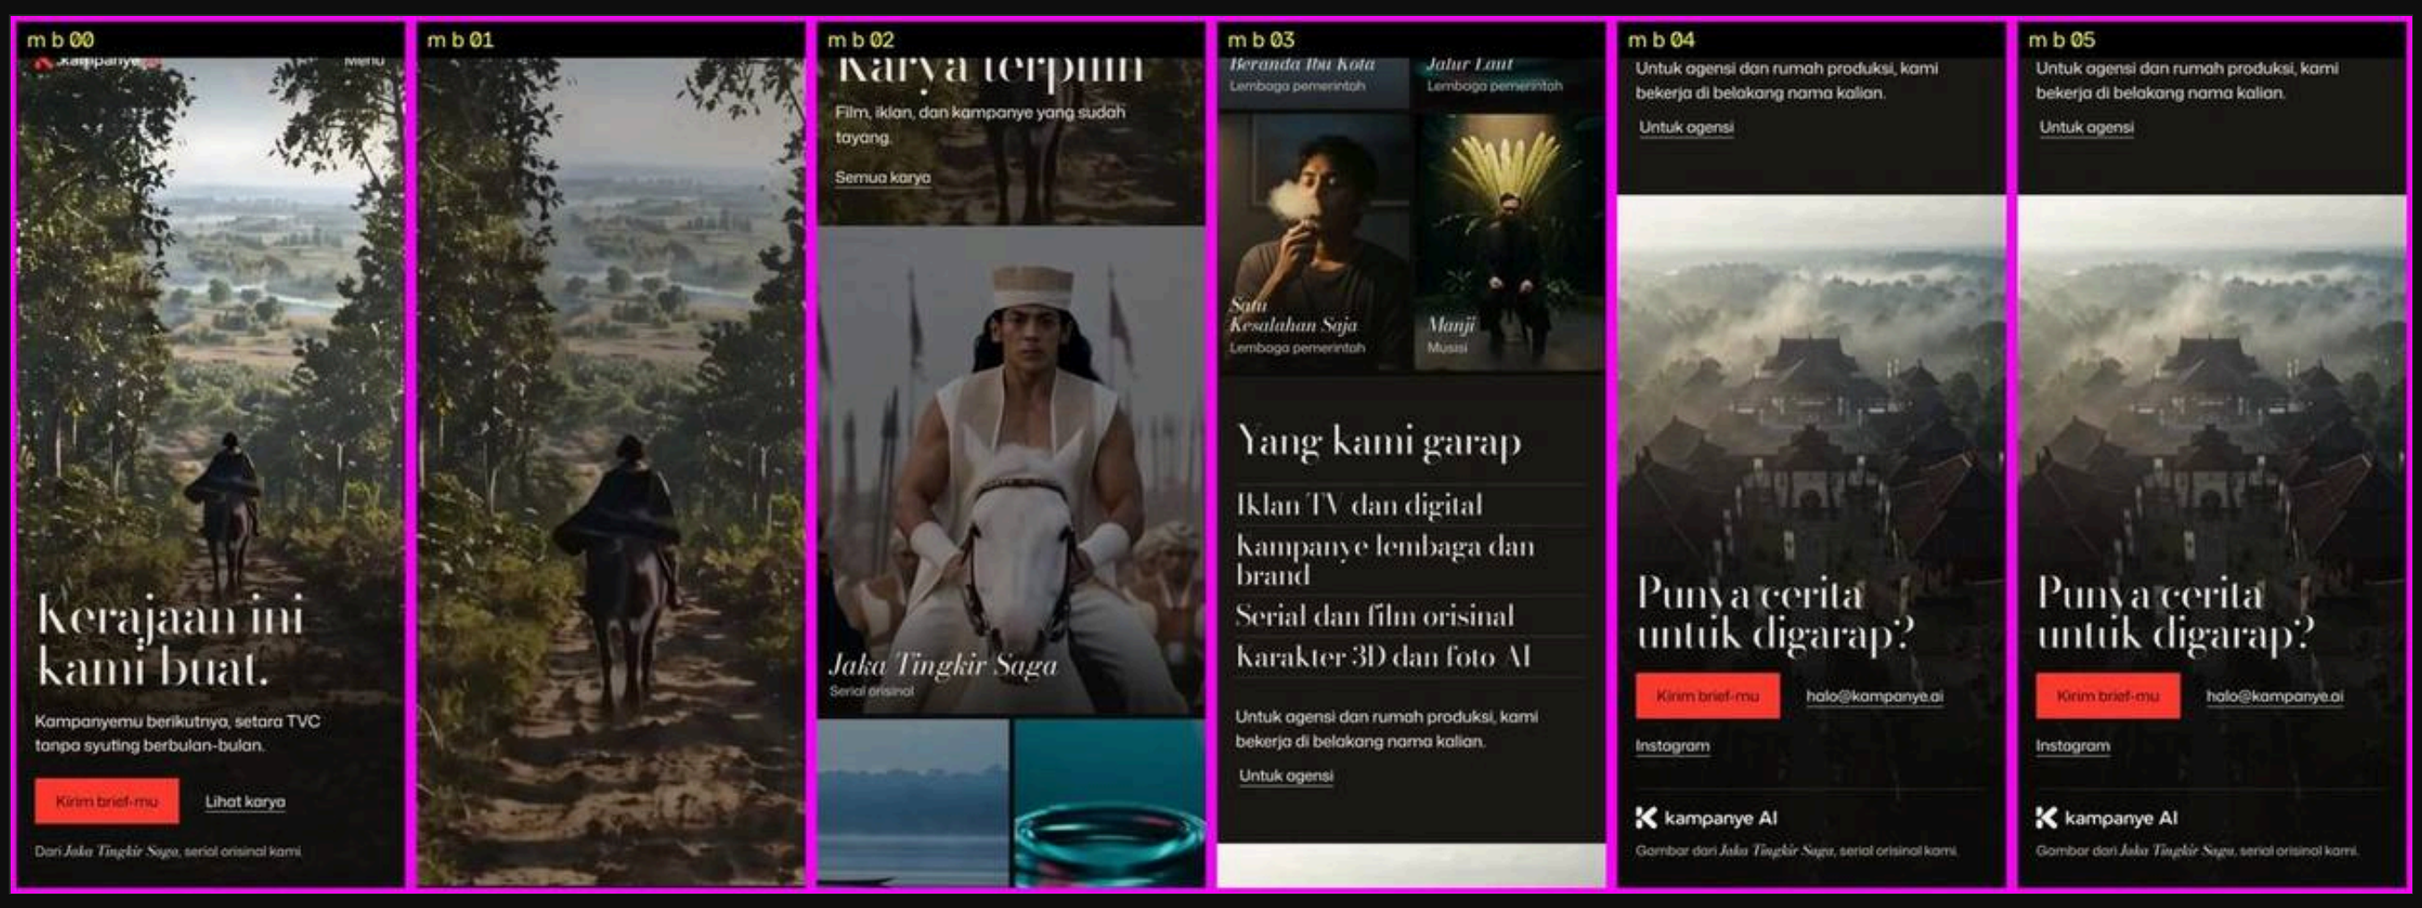
Screen recording of the working mock (headless browser)



The whole page, one screen at a time (1440, picture B)



The same with picture A



Phone, one screen at a time

Scroll glide on desktop

MEASURED (EMULATED INFINIX: CPU X6, SLOW 4G)

- Main picture painted in about 1.0 s on the phone, layout shift 0
- About 280 KB for the whole hero on phone and desktop
- Scroll glide without dropped frames on our PC; **not yet measured on the real Infinix**

Real desktop picture: widen the rider frame to 16:9 with GPT Image (about 14 generations, desktop only), or the full plate set (about 32). Priced before anything runs. **Headline candidates:** "Kerajaan ini kami buat." (in the draft), "Kami bangun kerajaannya. Kamu bawa ceritanya.", "Dari kerajaan kami, ke kampanyemu."

STAND-IN LIMITS

- B is a 720p trailer frame, upscaled; it has no rider
- A is synthetic at the edges: the mirror join flashes at the left edge mid-scroll
- Karya tiles are wide frames cropped tall; real vertical posters would fill the wall better

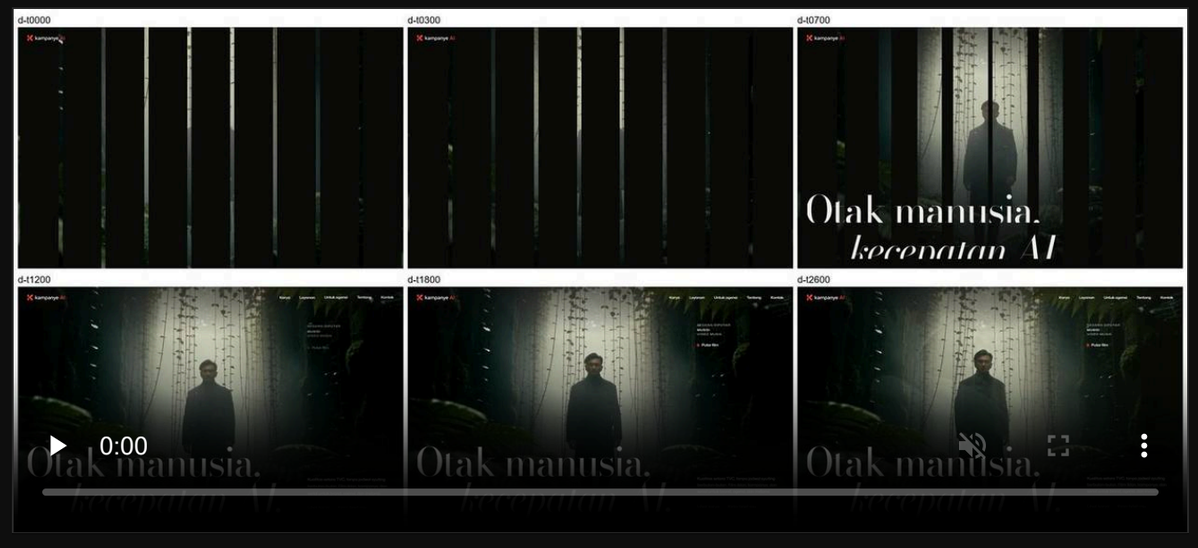
a

Earlier today: smooth arrival, cursor with weight (superseded: cursor effects dropped, no video hero on phones)

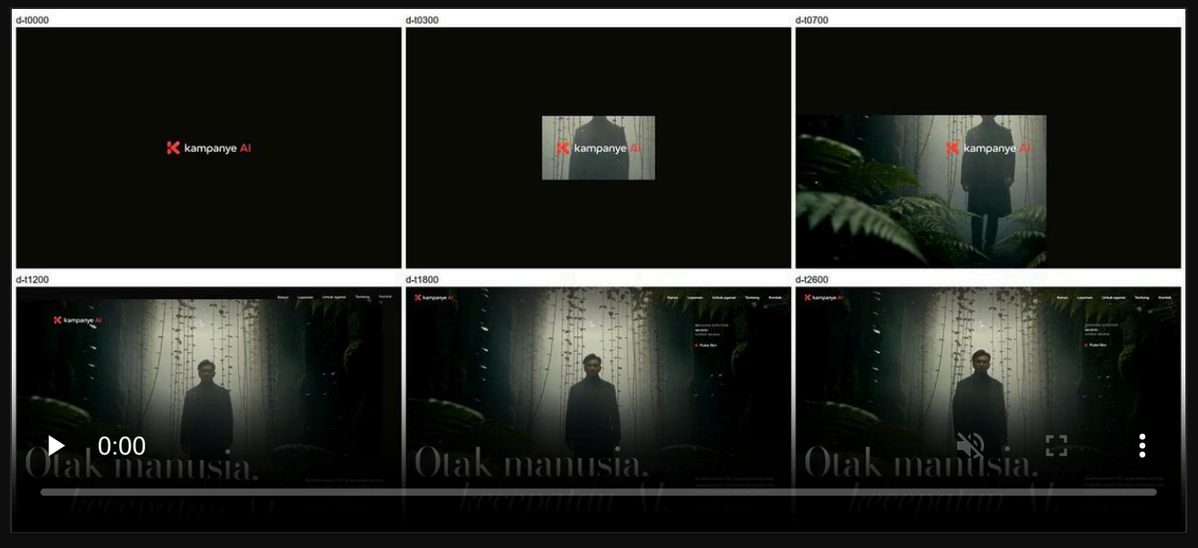
The wow is the site itself. A short cinematic arrival (under about 2.6 s, no loader) glides into a full-bleed loop cut from our calmest released films. After that, everything answers the cursor at its own depth and weight: the film lags and tilts, the headline drifts, buttons pull toward the pointer, a ring becomes 'Putar' over the film. Click the film and it grows into a theatre from the exact frame on screen. Type: Bodoni Moda + Mona Sans. Open it on a laptop: the cursor is half the experience.

Open: arrival A, Bukaan

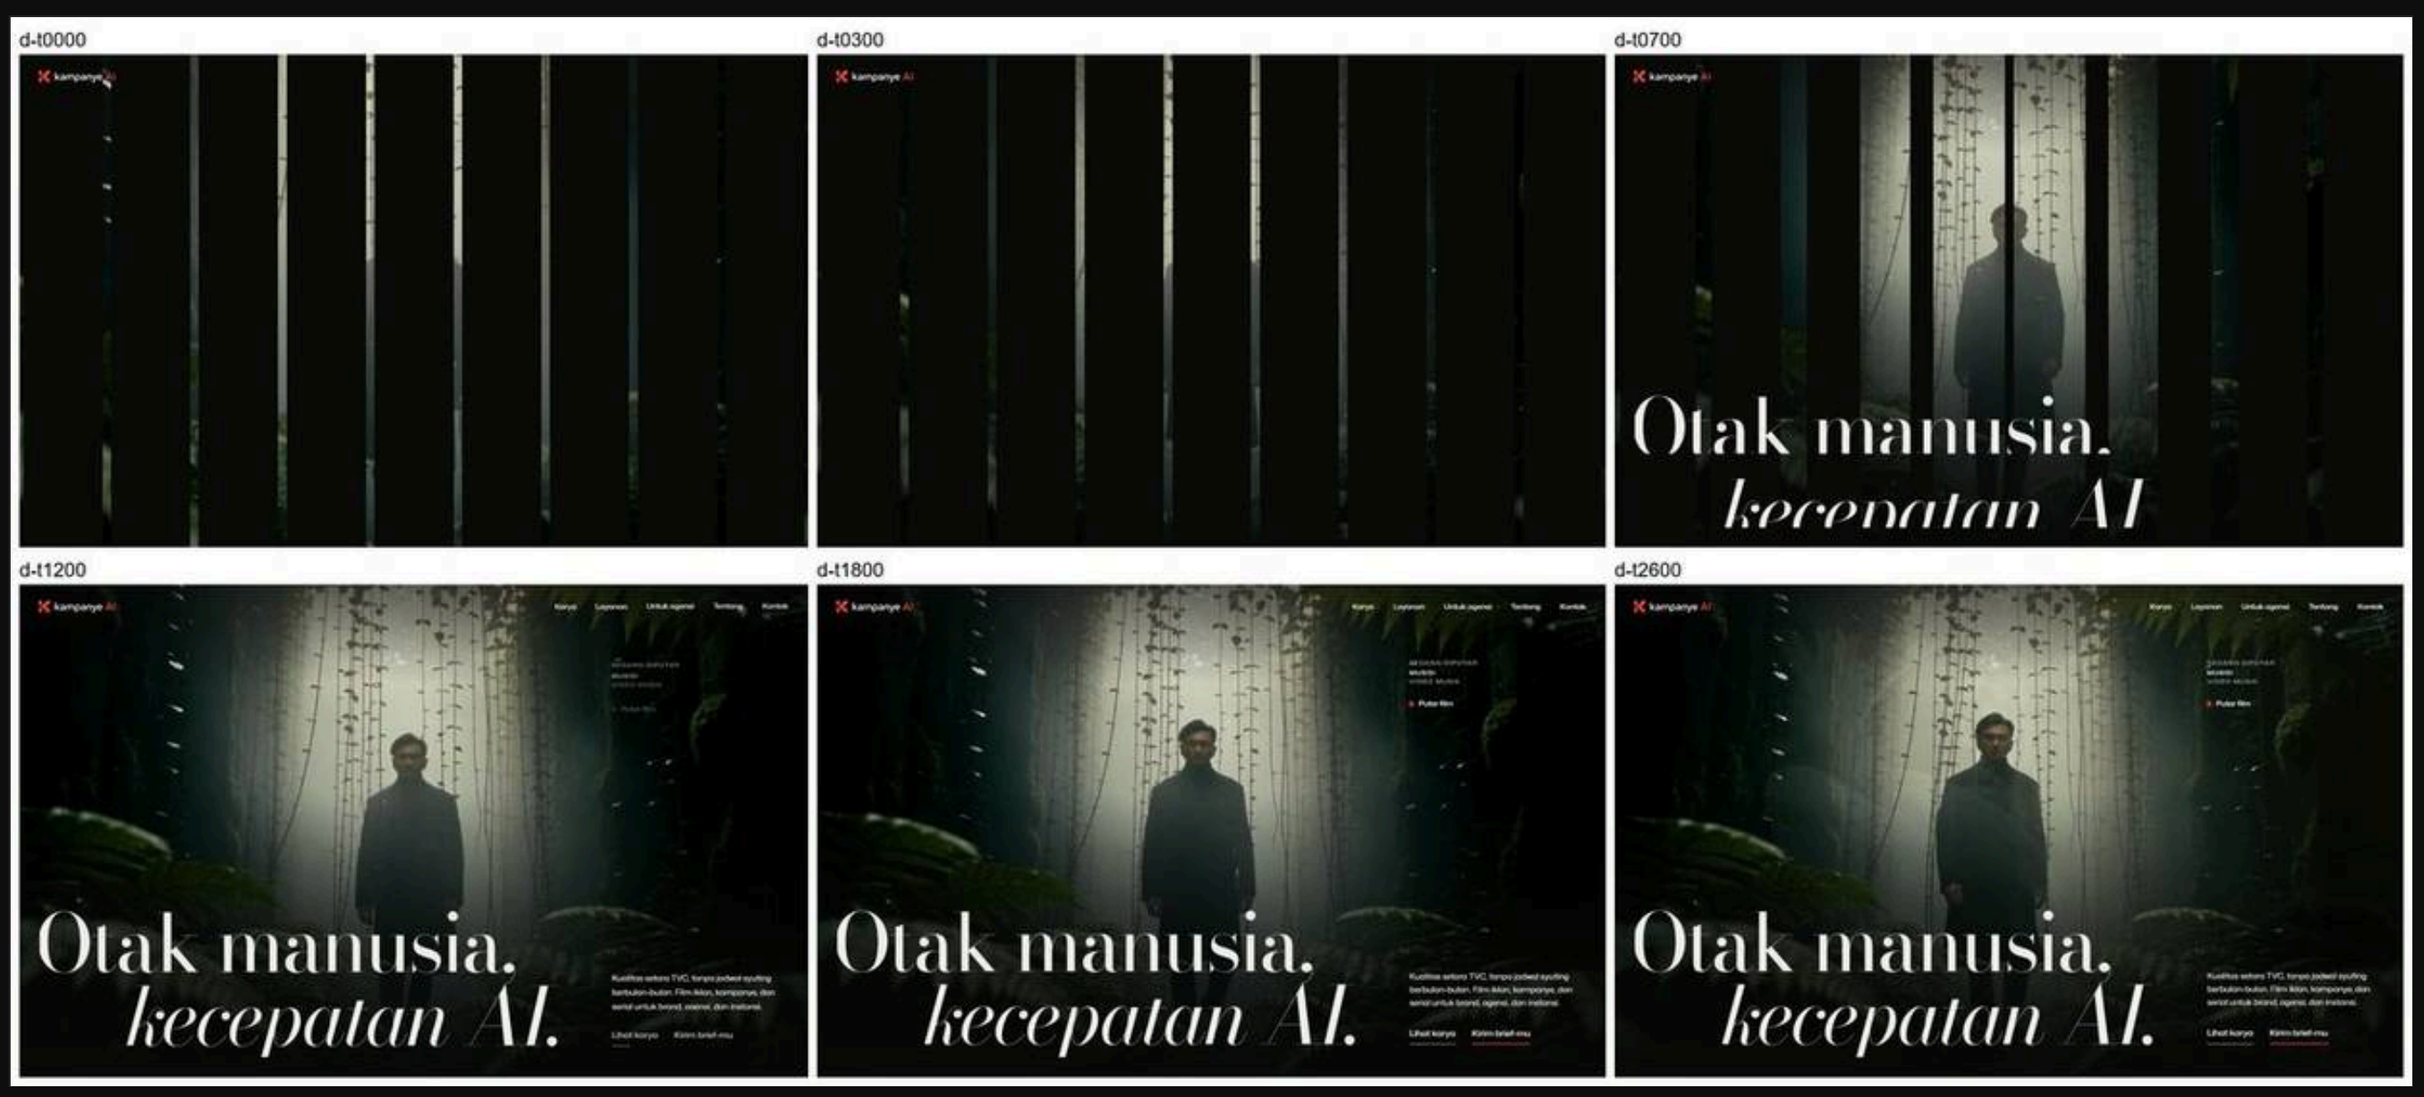
Arrival B, Mekar



Screen recording of the working mock (headless browser)



Screen recording of the working mock (headless browser)



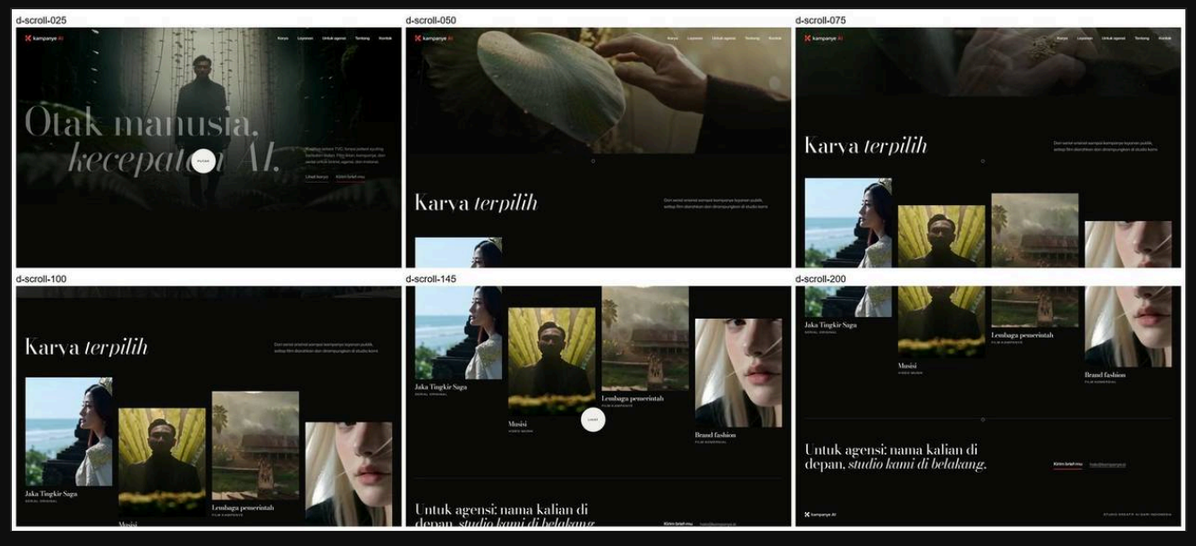
A, Bukaan: slats thin away from the centre as the film settles, Bodoni lines rise through masks (0 to 2.6 s)

B, Mekar: the logo holds on black, the film blooms from behind it, the logo flies into the header

Cursor: five depth layers, film tilt, follower ring

Magnetic hovers: the CTA underline floods into a band

Theatre grows from the frame on screen and continues the same shot



Scroll hand-off into Karya terpilih

Phone 390, arrival A

MEASURED (OUR PC, HEADLESS CHROME)

- No dropped frames in the intro or with the cursor, desktop and phone with 4x CPU throttle
- LCP 0.2 to 0.4 s desktop; 2.1 to 2.2 s on a throttled phone over slow 4G (budget 2.5 s)
- Video on first load: 2.1 MB desktop, 1.1 MB phone. CLS 0, no overflow, axe clean

FOOTAGE LOOP (16.8 S, CALM SHOTS ONLY)

- Fern in a shaft of light, a man walking out of light, a hand reaching for a leaf (music video)
- A hand with a gold ring on carved stone (Jaka Tingkir Saga)

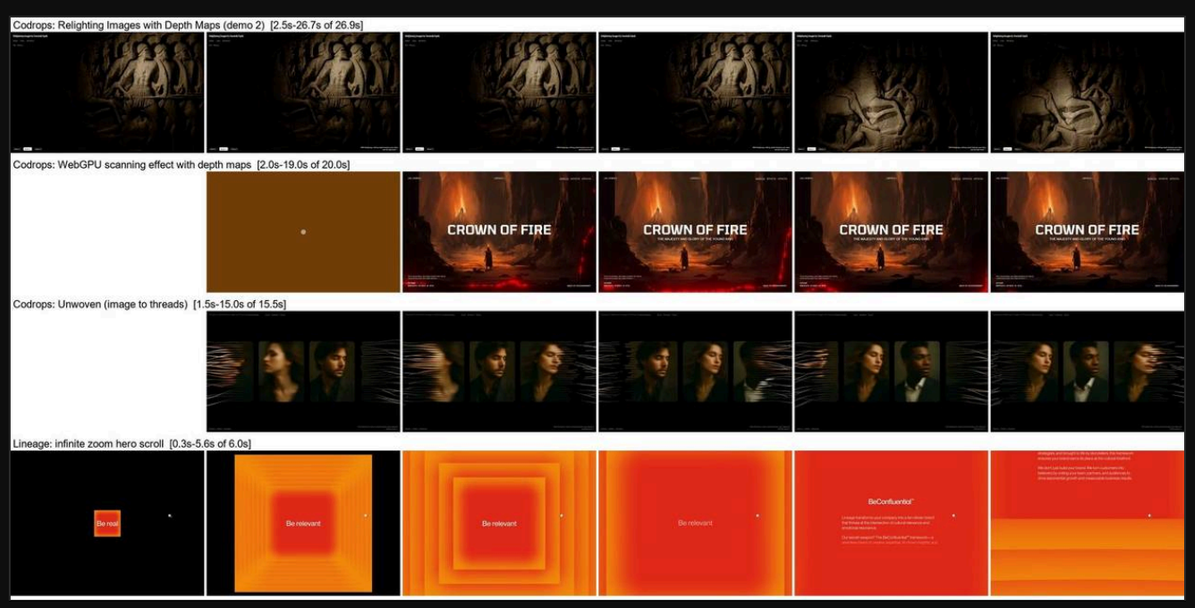
- **Still needs a real mid-range phone test.**

- Stilt houses at dusk (public campaign), a woman's eyes opening under red light, the man looking up into the light
- Four of seven shots come from one music video (the only clean 1080p source). Polda and Jaka shots are soft (576p/720p).

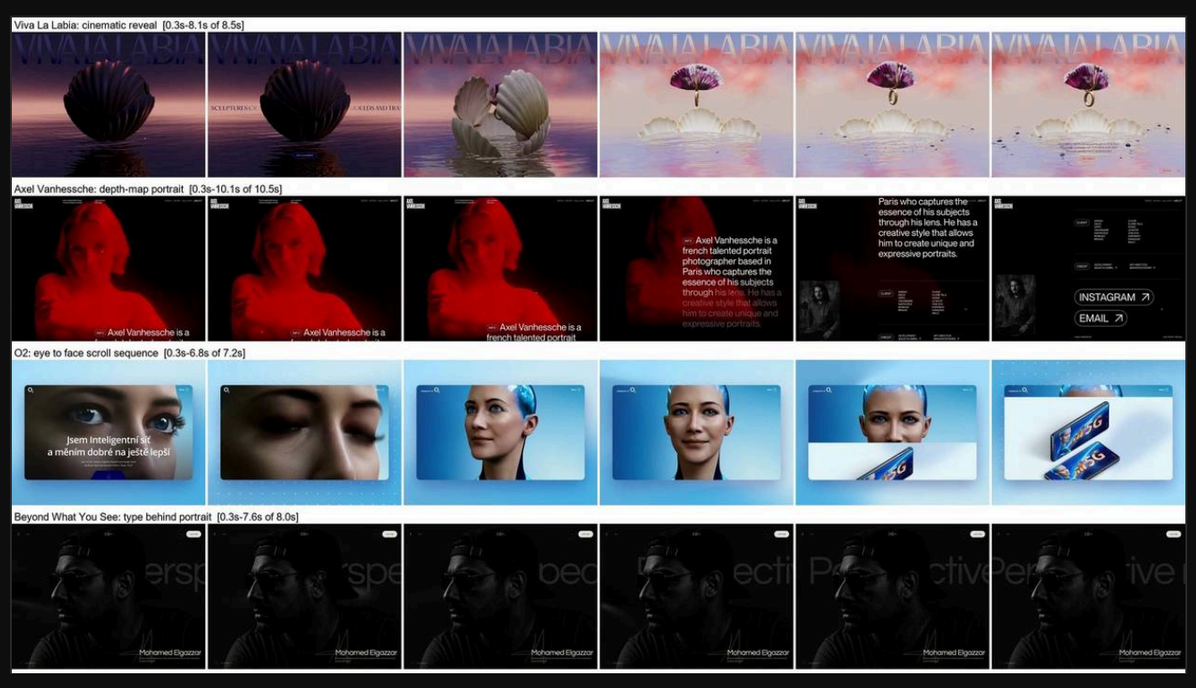
Open: A or B as default? Is there an audio bed we may use (then the 'Nyalakan suara' toggle returns)? Who is the stage portrait (shot 6) and is it cleared? Can we export 1080p masters of the Polda and Jaka shots?

Hero hooks: animations that make people ask how

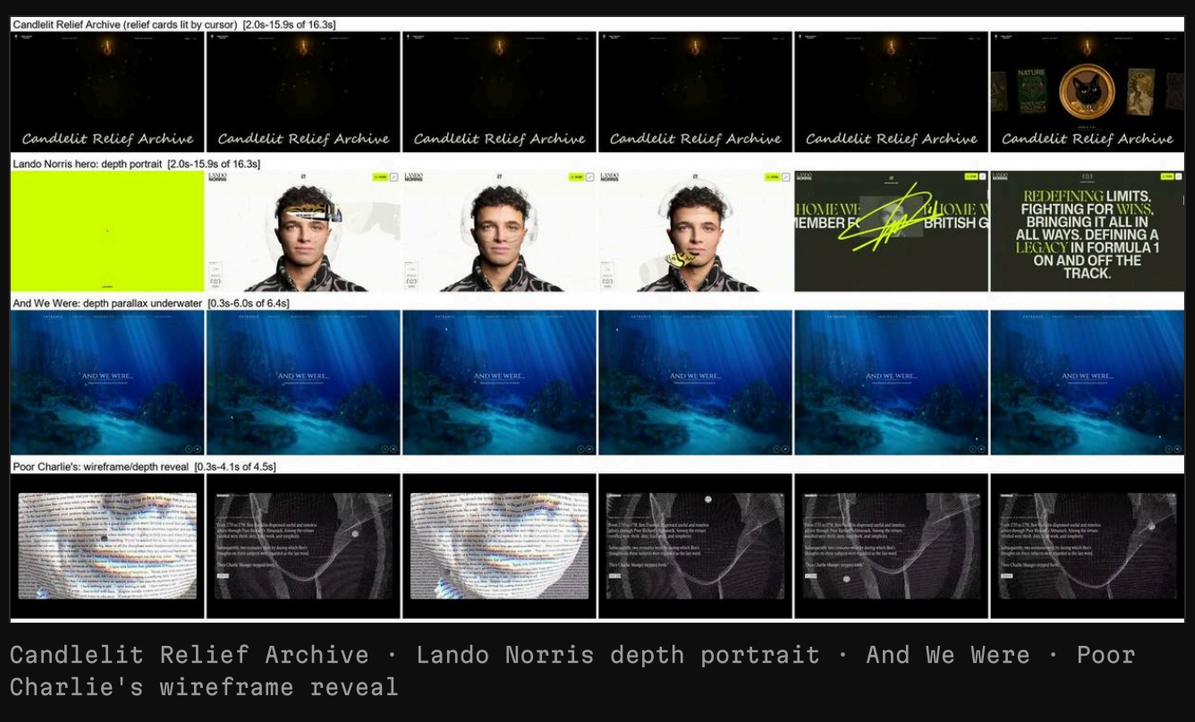
286 hero animations screened (Awwwards inspiration, Codrops, live award sites), 115 kept, 64 in the depth-map family around the ScanEffect you liked. The strongest family for us: **depth from a single AI still**. It is premium, it reads hand-made, and the asset is a still we generate plus a free depth map. Below: the finalists, then four hooks built from them.



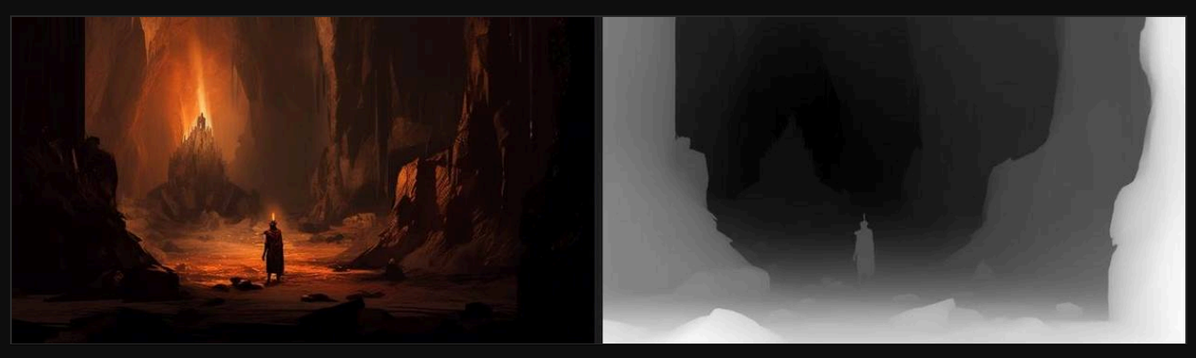
Relighting with depth maps · ScanEffect · Unwoven · Lineage infinite zoom



Viva La Labia reveal · Axel Vanhessche depth portrait · O2 eye-to-face scroll · Beyond What You See



Candlelit Relief Archive · Lando Norris depth portrait · And We Were · Poor Charlie's wireframe reveal



How ScanEffect is made: one AI still + an AI depth map. That is all the asset it needs

FOUR HOOKS FOR KAMPANYE.AI

H1 — RECOMMENDED

Pindai (the scan)

One calm, premium still from the Jaka Tingkir world (the young king at dawn in a keraton courtyard, mist, pillars) plus its depth map. A brand-red scan line sweeps from front to back. Behind the line the picture is shown as it was *made*: pencil storyboard and depth wireframe. In front of it, the finished frame. The pointer tilts the scene slightly. The headline lands as the scan passes: *Tidak ada kamera di lokasi.*

FROM	ScanEffect (your pick) + Poor Charlie's wireframe reveal
ASSET	Final still + storyboard variant of the same frame (GPT Image) + depth map (Depth Anything, free, local)
TYPE	Type lab 4 (Bodoni, dark) or 1 (Switzer + Newsreader Italic)
TECH RISK	WebGPU, falls back to WebGL2 by itself (tested on effect1); still image under reduced motion

H2 — STRONG SECOND

Pelita (the lamp)

A carved temple relief telling the Jaka Tingkir story, in the dark. The cursor (or a slow automatic path on phones) is an oil lamp: light rakes across the carving and the shadows move with real depth. It reads hand-carved stone, and it was made by AI.

FROM	Codrops Relighting Images + Candlelit Relief Archive
ASSET	Relief still (GPT Image) + depth map + normal map derived from depth
TYPE	Type lab 2 (Gambarino, gallery) on paper below the hero, or 4 on dark
TECH RISK	Relighting demo needed WebGPU; we would write a WebGL version. Mid risk on phones

H3 — BEST FOR BRAND BUYERS

Satu adegan, banyak dunia (one scene, many worlds)

The same framing and the same subject (a woman in kebaya, or a hero product) while the world around her changes: studio, rain-soaked Jakarta street, rice terrace, palace hall. Each change sweeps through on depth, so she stays put while the world is rebuilt around her. It proves the AI craft brands care about: consistency.

FROM	Mavericks Corral, Hung, Unwoven, ScanEffect transition
ASSET	4 to 6 consistent variants of one frame (GPT Image edits) + a depth map each
TYPE	Type lab 1 or 5

H4 — MOST NARRATIVE

Dari naskah ke layar (script to screen)

The screenplay face types a scene heading. Scrolling then plays a slow camera push into that exact scene, baked as frames from a short Seedance clip: the script becomes film under your thumb.

FROM	Type lab 6 + O2 eye-to-face scroll sequence + Wealthsimple
ASSET	Start frame (GPT Image) + one Seedance clip (about 5 s, 720p), exported as an image sequence
TYPE	Type lab 6 for the script, 1 for the rest
TECH RISK	Image sequence weight on phones; needs a short sequence and AVIF frames

TECH RISK	WebGL, low to mid risk; images can be lazy-loaded one ahead

Cost, estimates: GPT Image stills are a few cents to a few tens of cents each (exact price to confirm before I spend). Depth maps run free on this PC. One Seedance clip of 5 s at 720p is about $1.20 by the token formula in the Möbius notes (seconds × width × height × 24 / 1024 tokens at $10.70 per million). Nothing gets generated without your OK.

Free first step: I can prototype H1 today using a still we already released (Jaka Tingkir frames from the site) plus a free local depth map, so you see the real effect, in brand red, before any money is spent.

00

Type lab: six font combinations as real heroes

After A and B were rejected, six finished first screens, each built on a different font combination with its own composition. Four are on a paper ground. The picture is a calm stand-in (the new hero asset comes later), so judge the type, the layout and the craft. Open each on a laptop and a phone.

Open all six, stacked

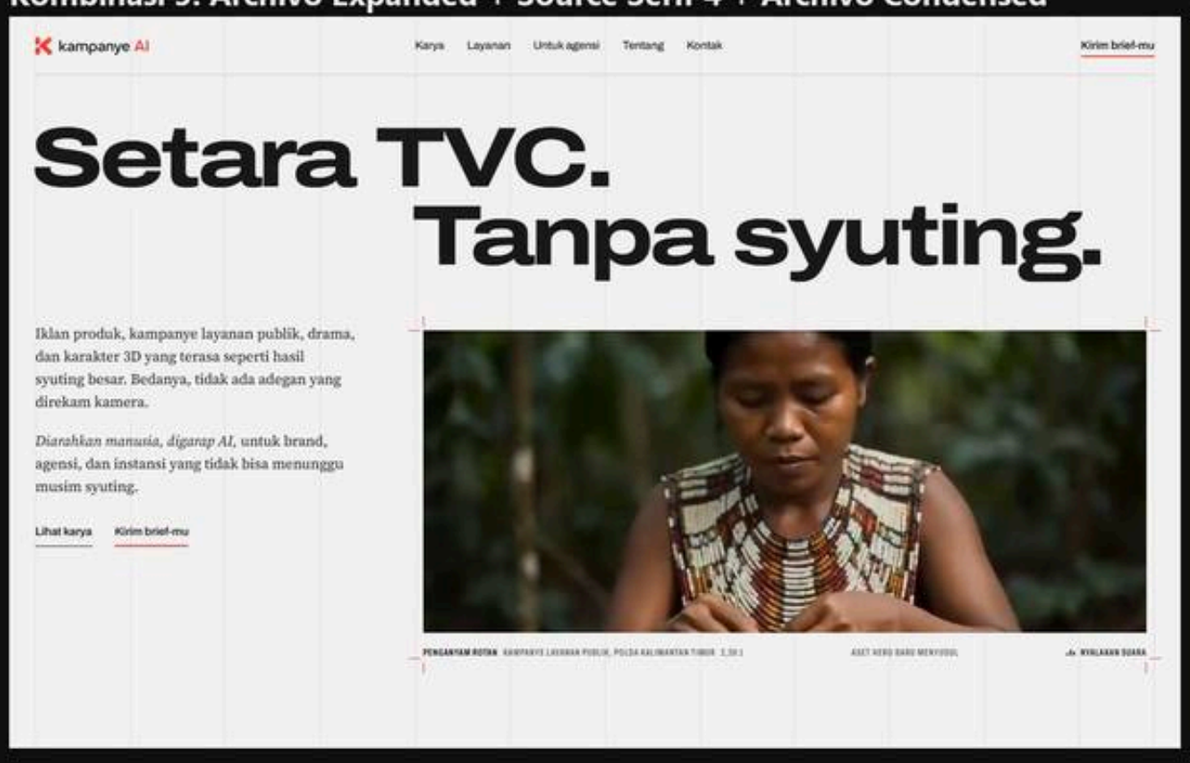
Kombinasi 1: Switzer + Newsreader Italic (di dalam judul) + Switzer

Kombinasi 2: Gambarino + Hanken Grotesk + Azeret Mono

Kombinasi 3: Big Shoulders Display caps + Zodiak Italic + Zodiak

Kombinasi 4: Bodoni Moda (opsz 96) + Mona Sans + Mona Sans Expanded

Kombinasi 5: Archivo Expanded + Source Serif 4 + Archivo Condensed



Kombinasi 6: Courier Prime + Instrument Sans + Instrument Sans Condensed

Desktop 1440. Click to enlarge

Phone 390

#	DISPLAY	TEXT / LABELS	GROUND	HEADLINE	WHY IT READS PREMIUM	
1	Switzer 500 + Newsreader Italic inside the headline	Switzer	Paper	Ini tidak *disyuting.* Ini [film] *disutradarai.*	The film sits inside the sentence; the italic marks the two words the claim turns on	Open
2	Gambarino	Hanken Grotesk + Azeret Mono	Gallery wall	Kualitas setara TVC, tanpa jadwal syuting berbulan-bulan.	A print hung on a wall with a museum card: 'Tidak ada kamera di lokasi'	Open
3	Big Shoulders caps + Zodiak Light Italic	Zodiak	Paper	SETARA TVC, / *tanpa jadwal syuting berbulan-bulan.*	Film-poster billing; the image band breaks both margins	Open
4	Bodoni Moda (opsz 96), roman + italic	Mona Sans + Expanded caps	Near-black	Bagaimana / [still] / *ini dibuat?*	Fashion-film credits; asks the hook question outright; red '?' is the only colour	Open
5	Archivo Expanded	Source Serif 4 + Archivo Condensed	Paper + printed grid	Setara TVC. Tanpa syuting.	A print proof: visible 12-column grid, red only as crop marks	Open
6	Courier Prime (screenplay)	Instrument Sans	Paper + full-height picture	EXT. HUTAN ROTAN ... Tidak ada kamera di lokasi. POTONG KE:	Script written by people, picture made by AI: the process is the first screen	Open

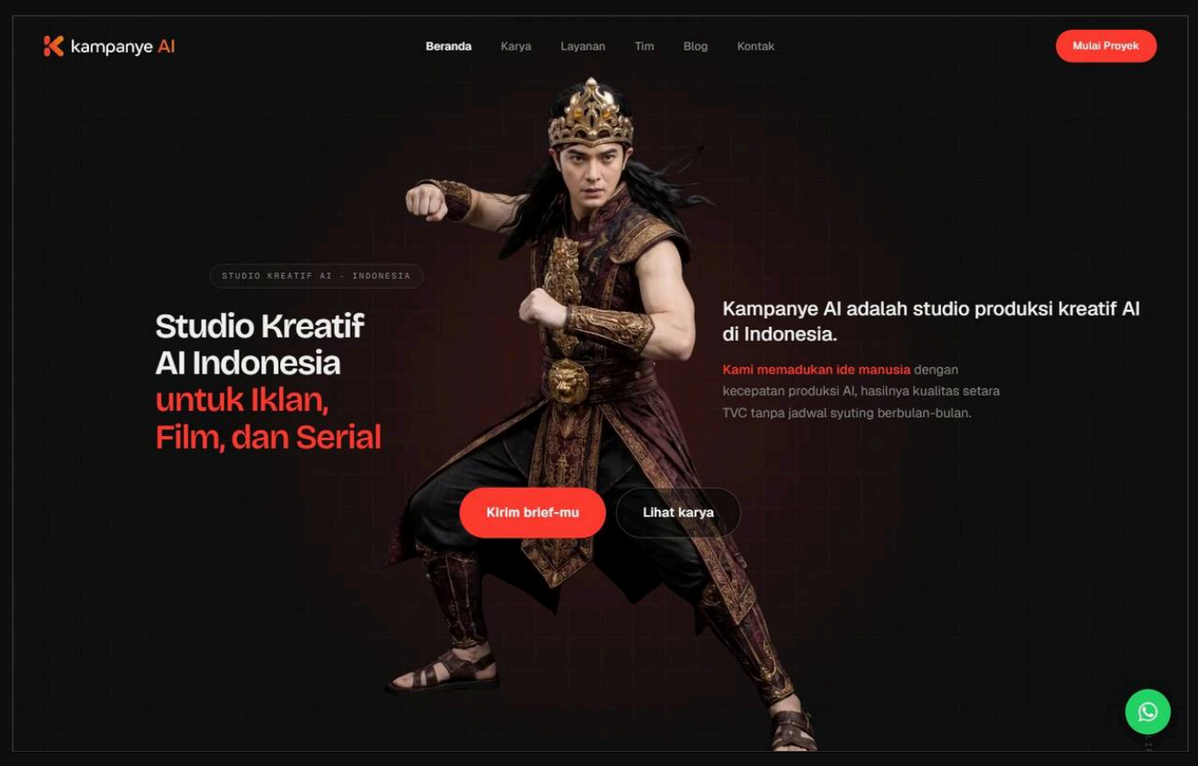
Designer's picks: 1 (Switzer + Newsreader Italic) as the system for the whole site: one neutral workhorse with an italic voice, the safest to build. 4 (Bodoni + Mona Sans) if you accept a dark ground: the most cinematic, and it asks "how did they make that" outright. Wildcard: 6's screenplay face only for the hero and case-study "naskah" moments, on top of 1's system.

Open question: "16:9" and "2,39:1" appear as small format labels. Are those allowed under the no-numbers rule?

01

Where the live site stands

Blind critic, never saw the code. Jury estimate is about 7.0, in the Honorable Mention range, below Site of the Day (7.2 and up). The critic's own strict score is 5.95.



Live home hero today. Orange K logo, gradient 'AI', centred cut-out character, pill buttons

Design	6.5
Usability	5.0
Creativity	6.0

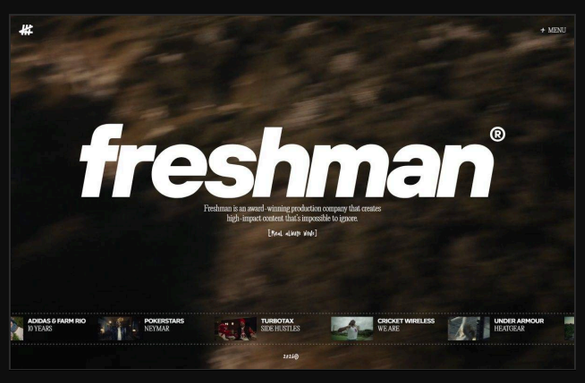
03

What premium looks like in our category

Each pattern showed up in two or more sources. The example screenshot is the clearest instance.



freshman.tv

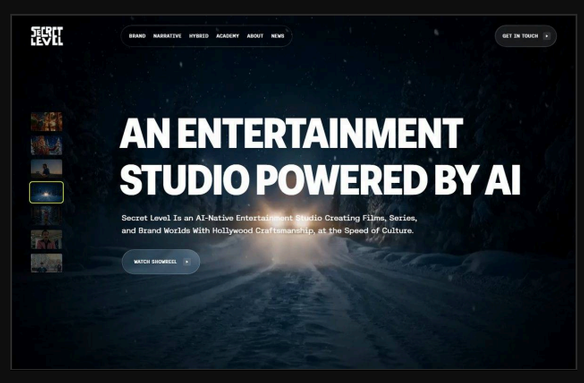
The work IS the hero

A muted full-bleed film, a tiny nav and a one-line caption (client / director / title). 28 of 64 showcase sites had video in the first viewport.

Biscuit Filmworks

Expensive reads as absence

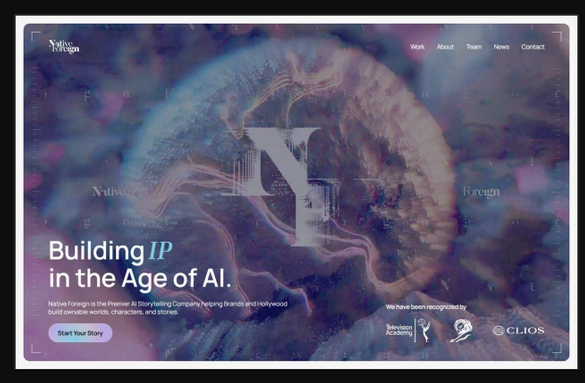
No sales button on the first screen and no stats. Sites with percentages read as vendors (Silverside's '68% cost reduction'). This backs the no-numbers rule.



Secret Level

Studio first, AI second

'An Entertainment Studio Powered by AI' (Secret Level). 'Human-directed. AI-powered.' (Utopai). Asteria barely says AI.



Native Foreign

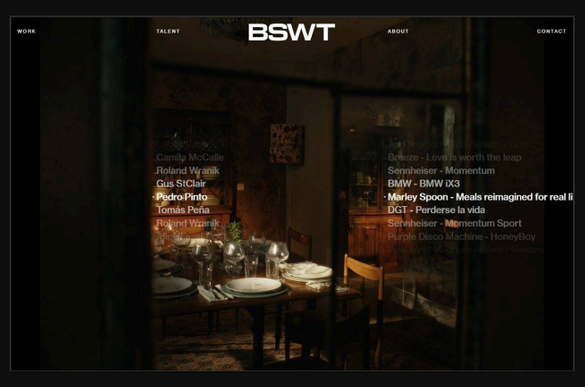
Provenance as proof

Human origination, chain of title, IP. It fits government buyers, and no Indonesian peer does it.

ilcapoproduction.com

Red reads expensive when flat

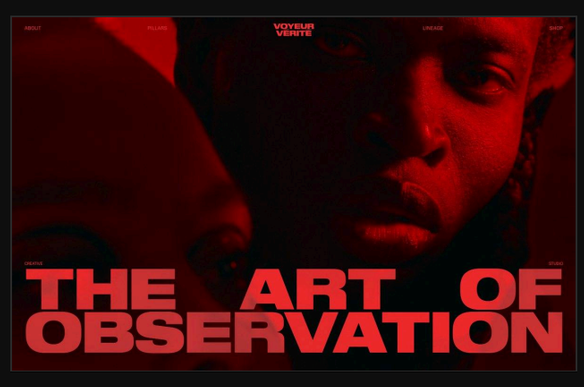
One red field, one ink, one huge typeface, no gradient. Il Capo is a production company. Red-to-orange gradients read cheap.



bswt.tv

A list that swaps footage

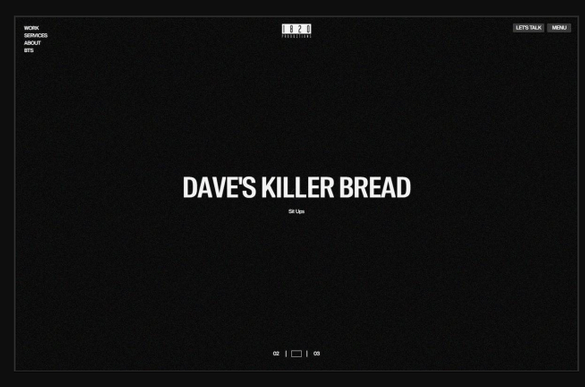
Production companies index work as a text list. Hover swaps the full-bleed footage (BSWT, Biscuit) or shows a cursor-follow preview (Unit9).



voyeurverite.com

Red as image grade

A red-graded portrait plus a huge red extended headline: the strongest red film page.



1820productions.com

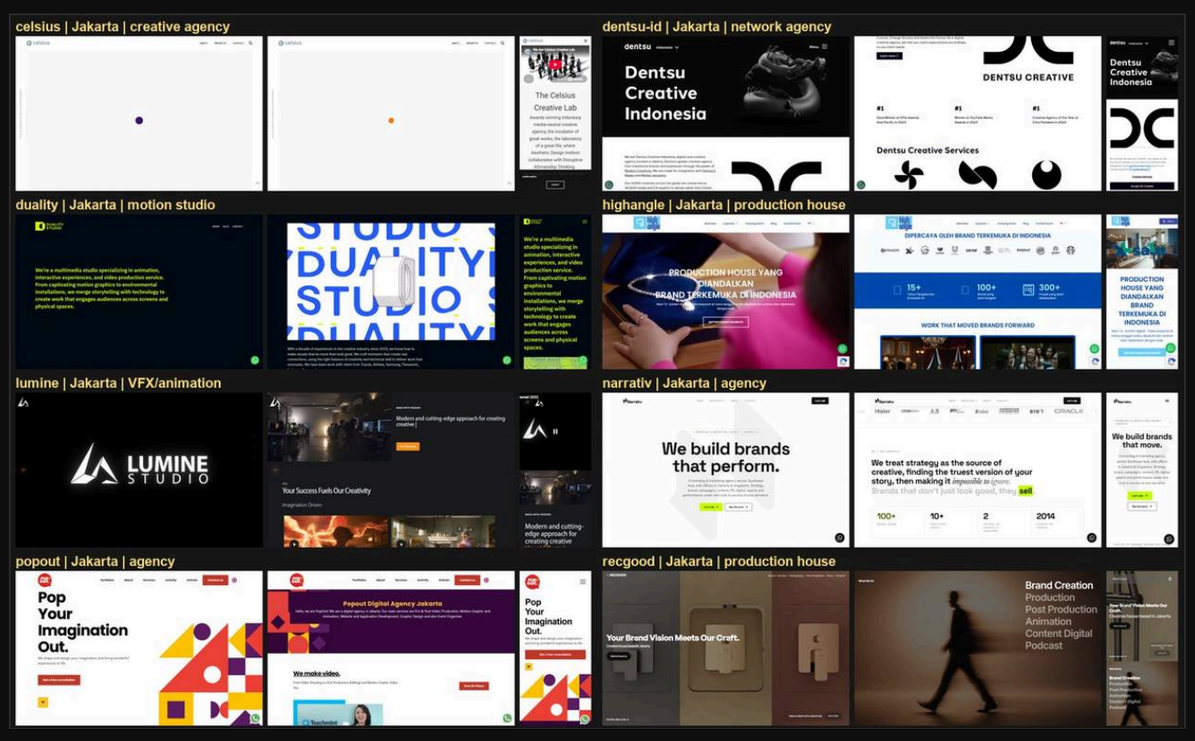
Title card as hero

One project title at a time on a black stage, then a cut to full-bleed video.

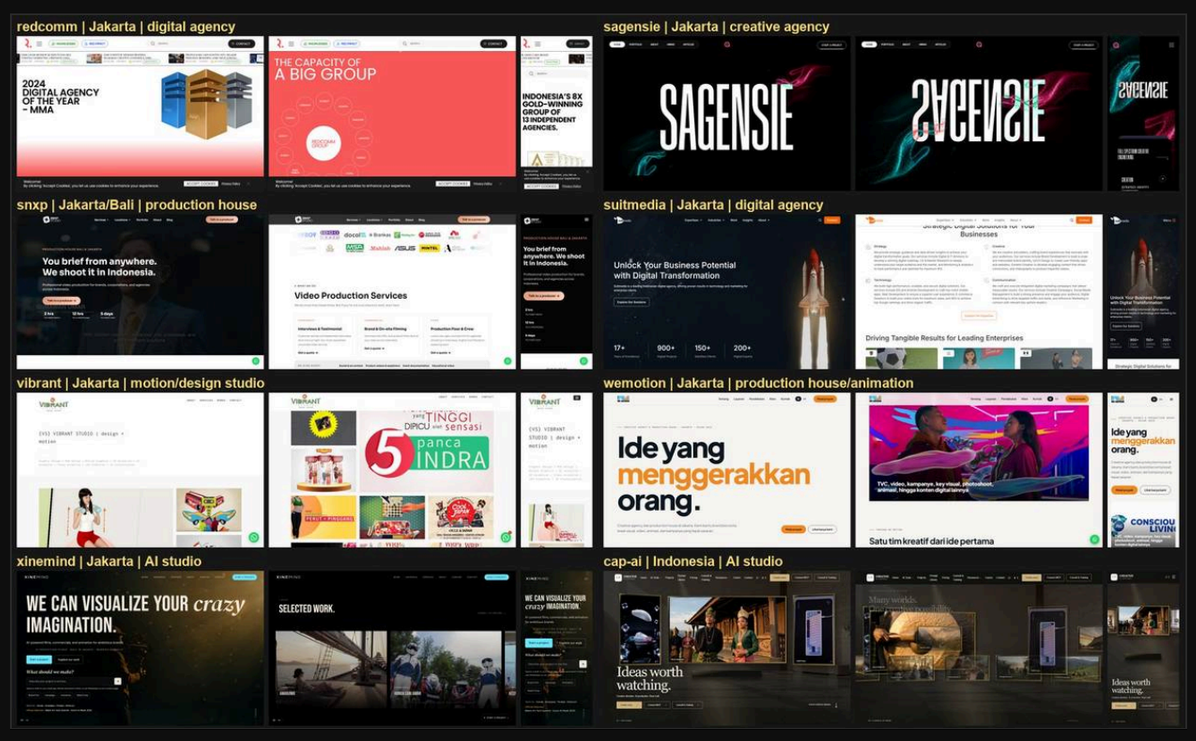
04

The local market

18 of 20 Indonesian studio sites are English-only. They lean on logo walls, '+' counters and award badges, and none has an agency / white-label page. A Bahasa-first editorial site with no numbers would stand out. Premium ratings are judgement calls from screenshots.



Jakarta / SEA studios, sheet 1



Sheet 2

05

Red, done expensive

18 red-led sites, measured. Every premium one keeps orange under 3.5%. The three palettes below use the brand red #FF3B30 with orange as a 0.8% accent.

A — Safelight Black

red as signal on film black (NYFF, Roundhouse, Montblanc tonal reds, RED)

ground	ink	muted	line	red	red-deep	tiny-orange
#0E0E0E	#F2F2F2	#9A9A9A	#2A2A2A	#FF3B30	#8E0F0B	#FF8A00

Kualitas sinema, tanpa jadwal syuting berbulan-bulan.

00:14:22 — 2.39:1 — Jaka Tingkir

Intended share of surface: ground 70% · ink 14% · red 14% · orange 0.8%. Contrast: ink/ground 17.2:1 · red/ground 5.4:1 · muted/ground 6.9:1

B — Rouge Field

full-bleed red ground, black ink, paper blocks (Reverse Studio, Neue Montreal, Beam, Marina Rachello)

ground-red	ink	muted	line	paper	red-deep	tiny-orange
#FF3B30	#1A1A1A	#5C100B	#B82019	#F2F2F2	#D92B21	#FF8A00

KUALITAS SINEMA, TANPA JADWAL SYUTING BERBULAN-BULAN.

00:14:22 — 2.39:1 — Jaka Tingkir

Intended share of surface: red field 62% · ink 20% · paper 17% · orange 0.8%. Contrast: ink/red ground 4.9:1 · muted/red ground 3.9:1 · paper/red ground 3.2:1 (large type only) · red on paper 3.2:1

C — Paper & Rouge

off-white ground, red as bands / marquee / big type (vemvem, Age of Union, IDFA, Nordiska)

ground	ink	muted	line	red	red-text	tiny-orange

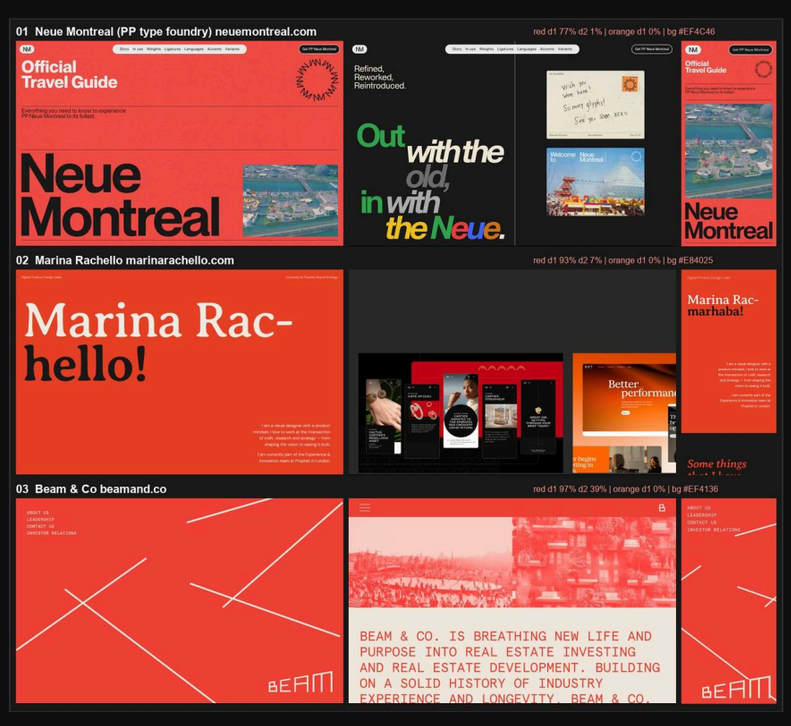
Kualitas sinema, tanpa jadwal syuting berbulan-bulan.

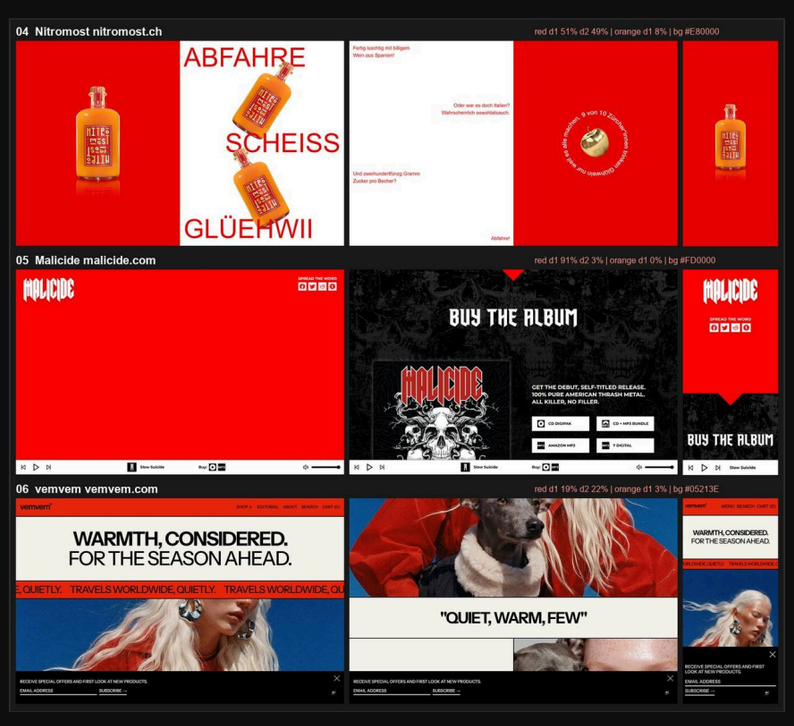
00:14:22 — 2.39:1 — Jaka Tingkir

Intended share of surface: paper 55% · ink 15% · red 29% · orange 0.8%. Contrast: ink/ground 15.5:1 · red/ground 3.2:1 · red-text/ground 5.1:1 · muted/ground 6.7:1

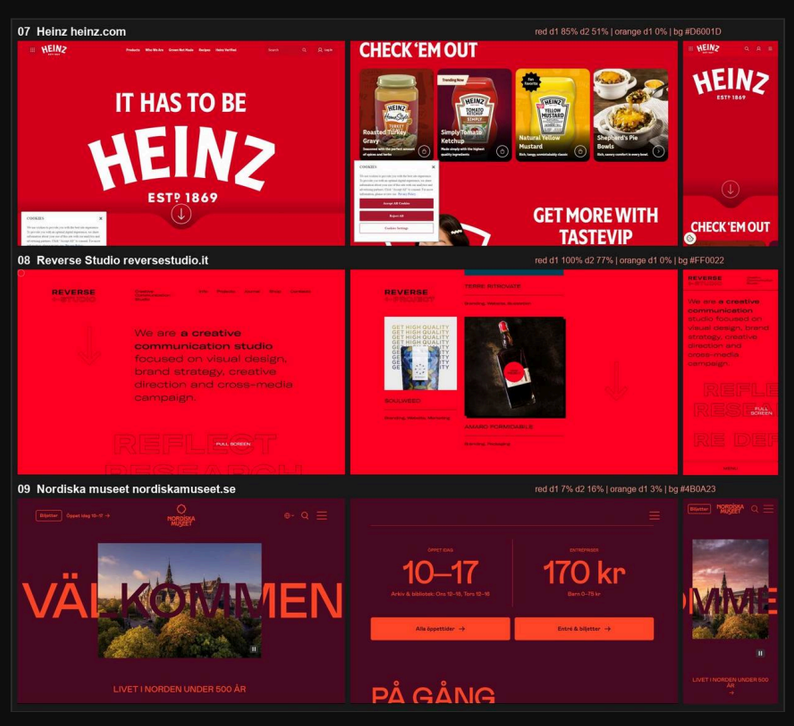
A Safelight Black · B Rouge Field · C Paper & Rouge (contrast ratios on the sheet)



Red sites 1



Red sites 2



Red sites 3

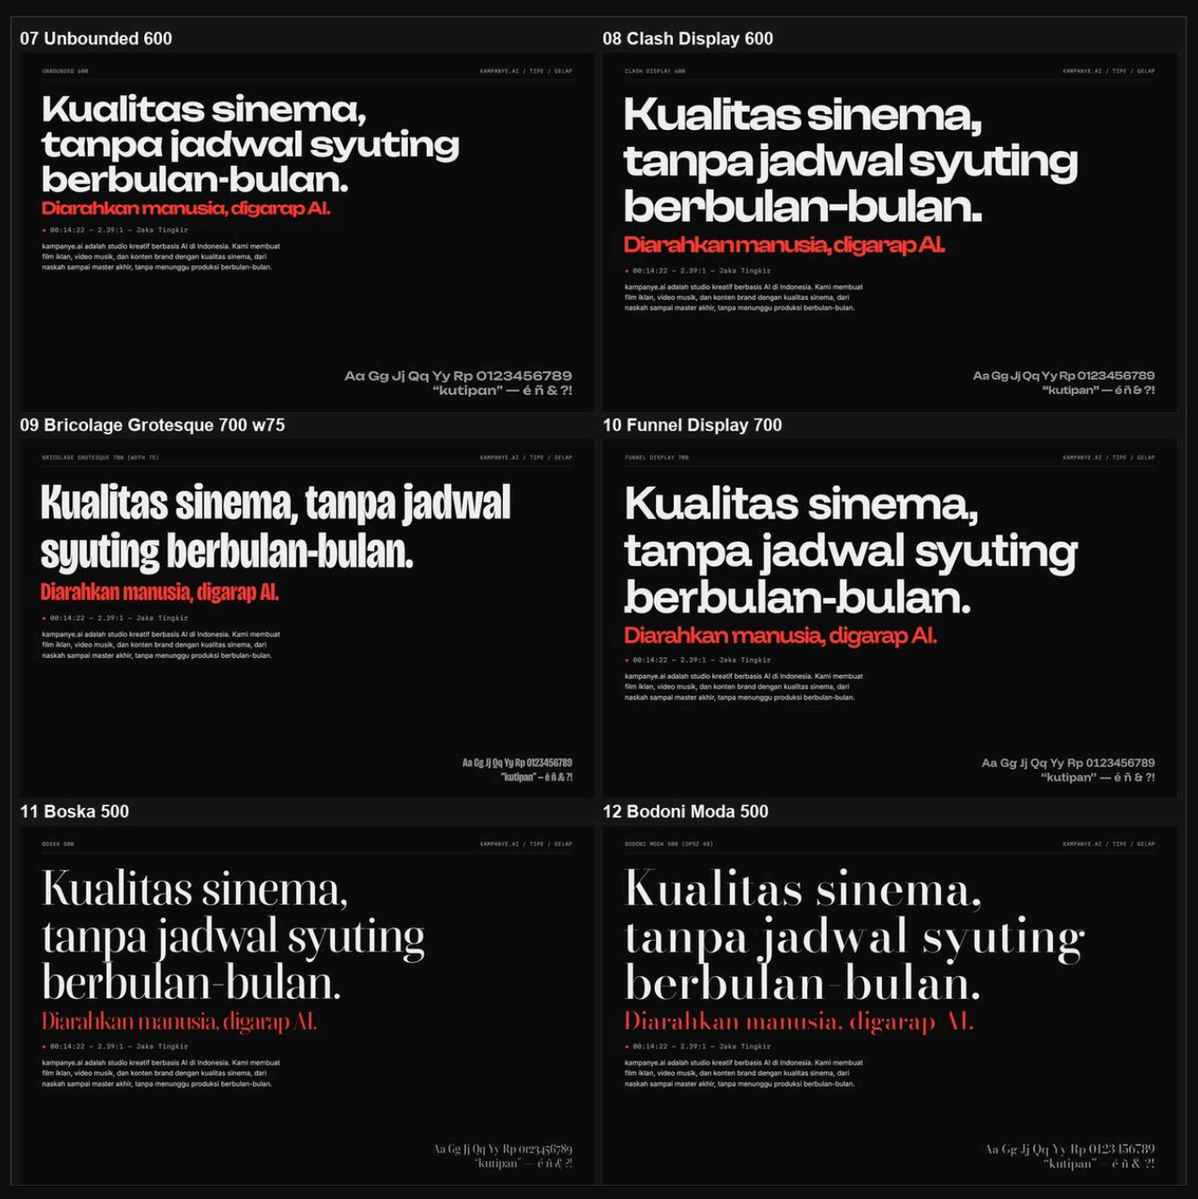
Small white text on #FF3B30 is only 3.2:1 contrast. On red fields, small text has to be #1A1A1A (4.9:1).

06

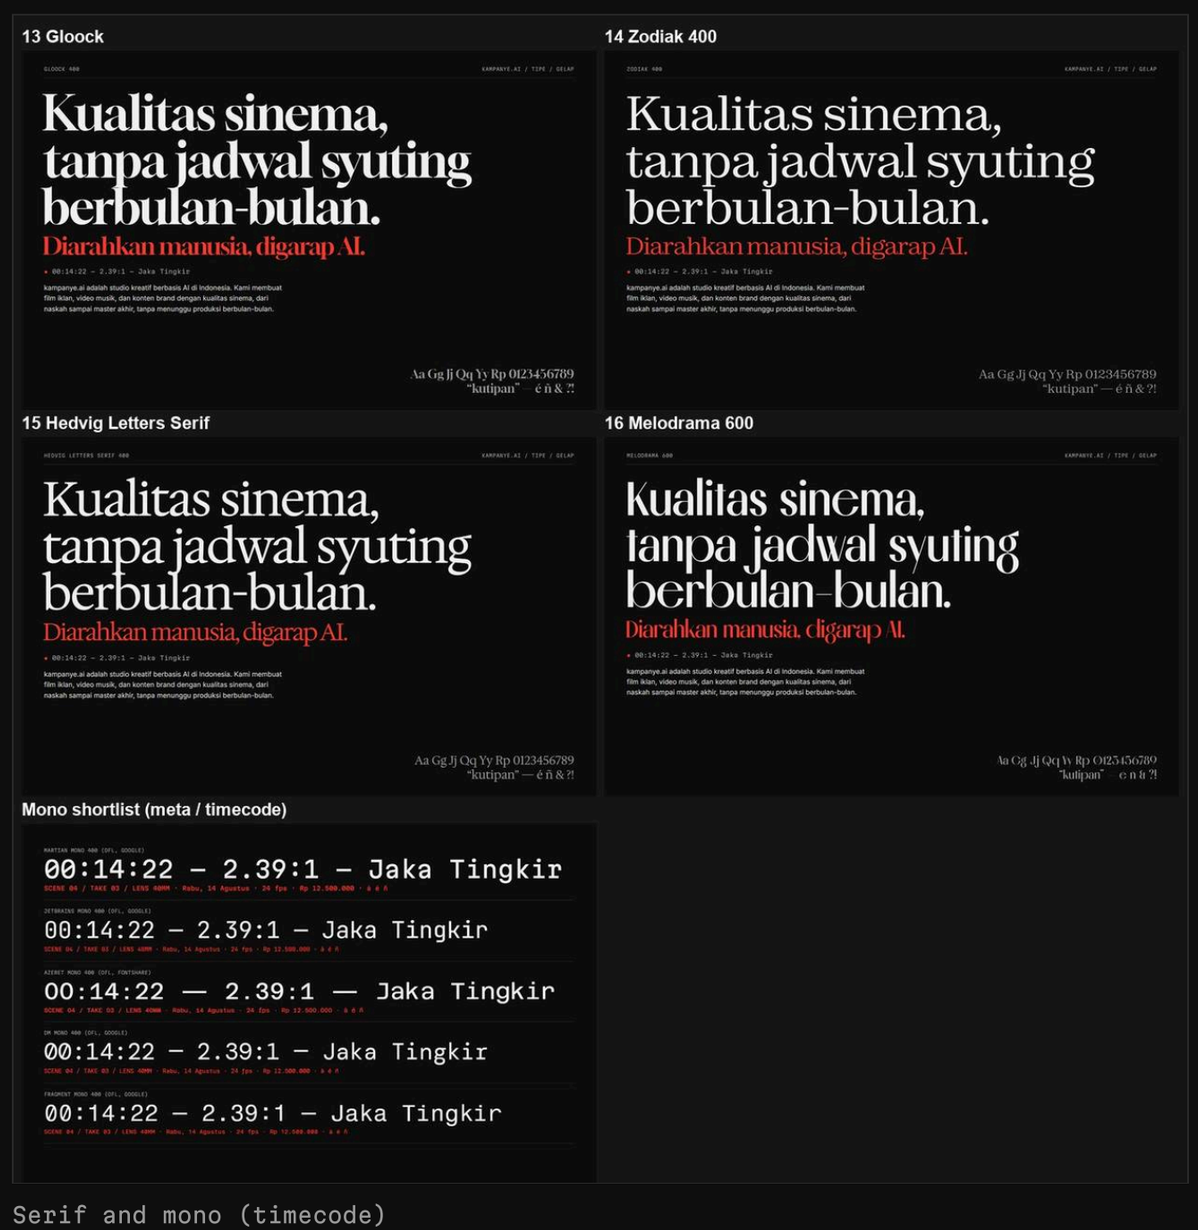
Type: single faces, then pairings

16 display faces rendered with our own copy. All are free (Fontshare / Google) and all cover Indonesian. Top 5: Boska (cinematic serif), Big Shoulders (film-title caps), Clash Display (safe Poppins replacement), Zodiak, Archivo Expanded. Avoid: Anton, Unbounded, Tanker (cheap poster).

Condensed and wide



Grotesk and serif



Serif and mono (timecode)

Top 6 on light

PAIRINGS

Two studies. **Measured:** the fonts actually rendered on 210 of the crawled sites, by role. **Curated:** 19 pairing principles (Typewolf, Fonts In Use, Klim, Practical Typography, Google Fonts Knowledge), 38 in-use examples, and 14 pairings rendered with our copy on dark (A) and red (B). Every font is free and covers Bahasa.

54%	63%	65 / 66	5 / 110	29%	18%
of 210 award/premium sites use ONE family in every role	of film/production houses: one family everywhere, mostly one grotesk	two-family pairs appear on only one site: the structure repeats, not the pair	Awwwards/showcase sites pair two similar sans. Winners avoid it	of AI studios use a serif display (mostly Instrument Serif over Inter)	use a mono for meta/labels

THE RULE THAT FALLS OUT OF BOTH

Use one workhorse family, or pair it with something **categorically** different: serif against grotesk, condensed caps against a calm sans, mono for timecodes. Never two near-identical sans. Small text on red is ink #1A1A1A. Paper on red only from 34 px up.

#	DISPLAY	TEXT	META	FITS	WHY
04	League Gothic	Hanken Grotesk	Martian Mono	B (and A)	Free stand-in for the Alternate Gothic film-title look; condensed caps + calm grotesk
03	Young Serif	Schibsted Grotesk	JetBrains Mono	B	Warm, broadcast-like; best on the red field, less cinematic on dark
07	Newsreader Display	Newsreader Text	DM Mono	A	One family, optical sizes; reads like credits and subtitles. Thin display weak on red
02	Gambarino	General Sans	Azeret Mono	A + B	High contrast; closest free feel to Canela; holds on both
15	Archivo Expanded	Archivo	Archivo Condensed	A + B	One family in three widths: lowest risk
14	Syne ExtraBold	Source Serif 4	JetBrains Mono	B	Unexpected but principled; memorable, short headlines only

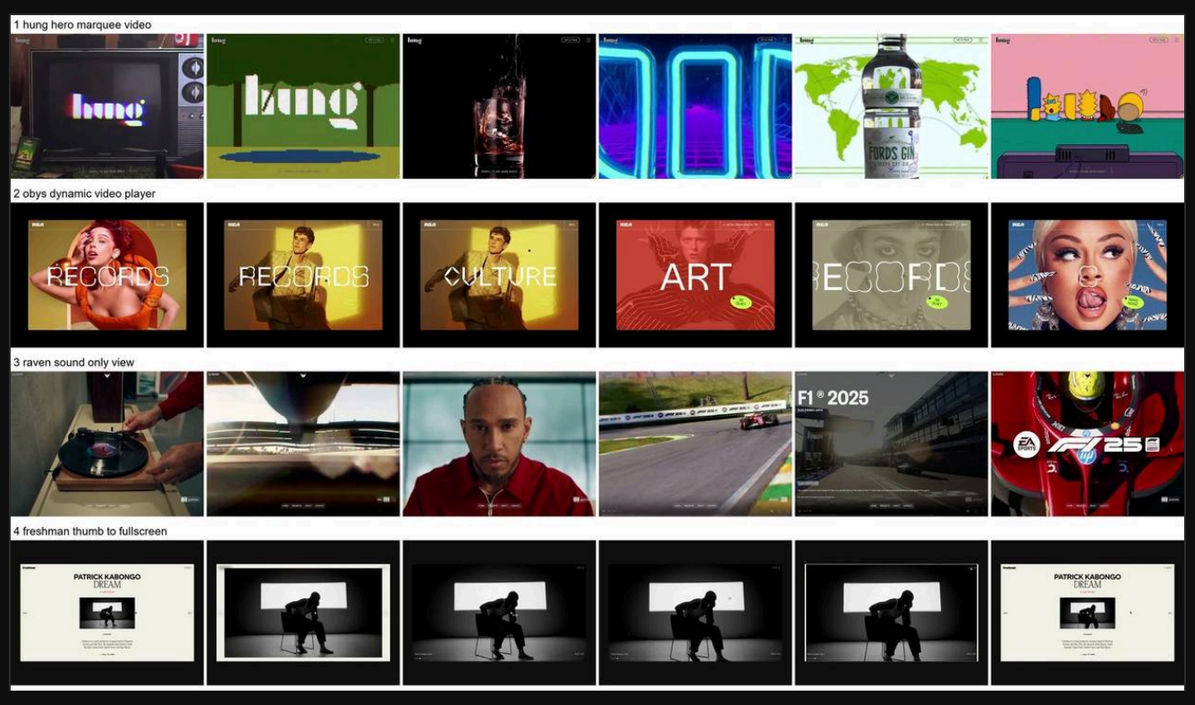
Dropped: Barlow (generic), Bespoke Stencil (military), Cabinet+Satoshi (SaaS)

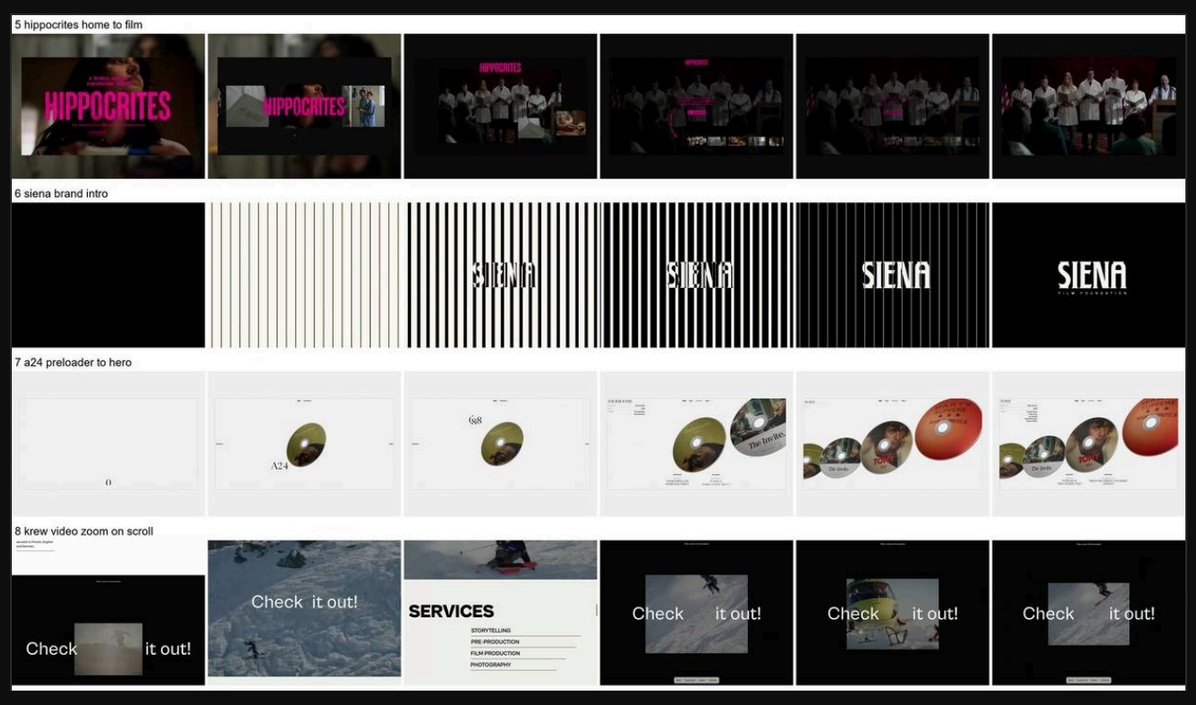
07

Motion that reads premium

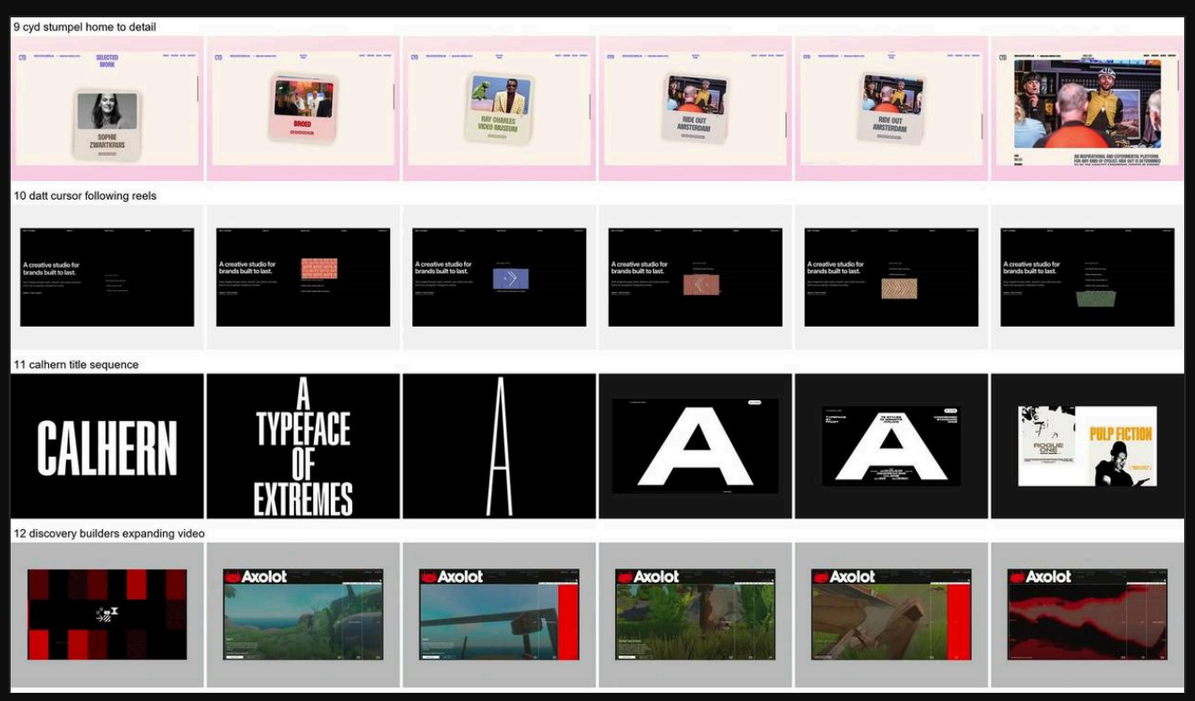
109 Awwwards interaction clips, frame-stripped, with 12 finalists. Motion verbs that fit film: cut, grow into theatre, title shrinks into the header. Cheap: fade-up on everything, bouncy easing, effects for their own sake.



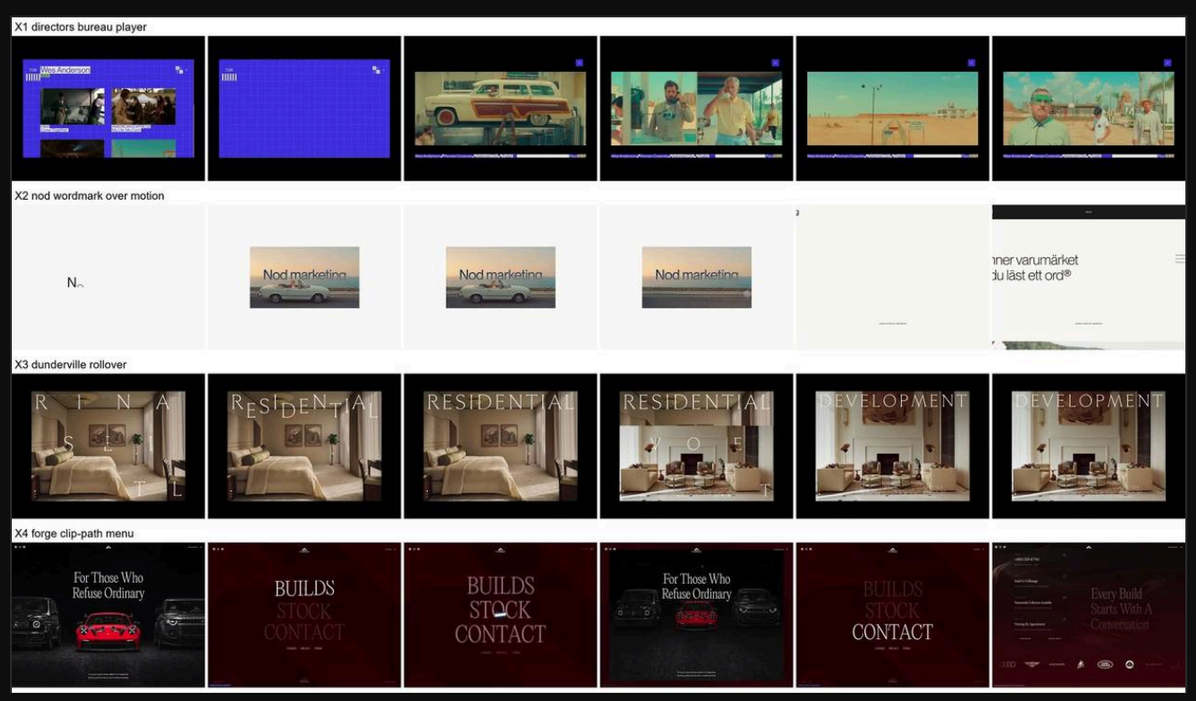
1 Hung (fixed chrome, film cuts behind) · 2 OBYS (outline words over clips) · 3 Raven (film to waveform) · 4 Freshman (thumbnail grows to theatre)



5 Hippocrites (title shrinks into header) · 6 Siena (slats into wordmark) · 7 A24 (preloader, torn mask) · 8 Krew (video in headline zooms to full)



9 Cyd Stumpel (card grows into next hero) · 10 Datt (cursor-follow reel) · 11 Calhern (title sequence) · 12 Builders (red panel wipe)



Extras: Directors Bureau, NOD intro, Dunderville rollover, Forge red clip-path menu

No clip showed a clean mute-to-unmute on a hero reel, so our "nyalakan suara" toggle is a proposal, not a copied pattern.

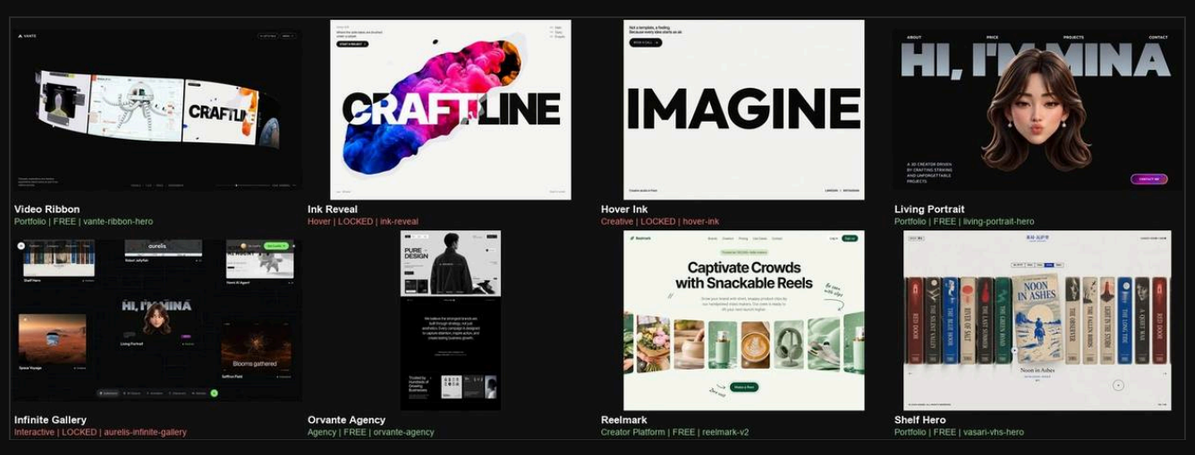
08 Learning from motionsites.ai

A prompt marketplace for AI site builders. Useful for techniques and prompt anatomy. It is also a catalogue of the 'AI template' look juries reject, so we read it critically.

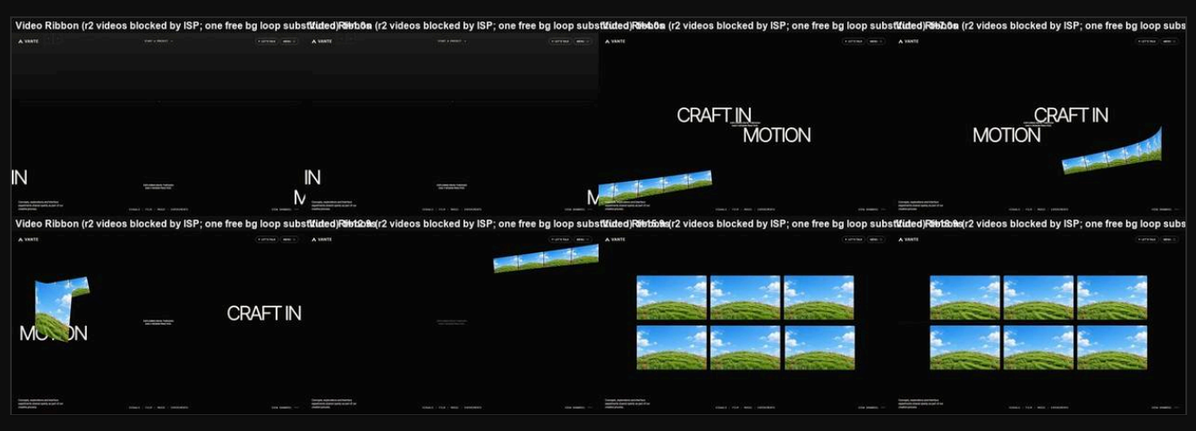
704 prompts: 274 free (full text, no account), 430 locked (not read). 305 background loops. No item has a live demo, so the five free prompts that ship code were built locally and recorded. The preview videos sit on `r2.dev`, which your ISP (MyRepublic) DNS-blocks, so motion on locked items is unseen.

TECHNIQUES WORTH TAKING

TECHNIQUE	SOURCE ITEM	FITS	USE ON KAMPANYE.AI
Scroll / mouse-scrubbed reel	Cast and Render, 3D Character Studio	A	Reel hero: scroll or pointer scrubs the film
Video ribbon that lands as a grid	Video Ribbon	A	Karya opener: a ribbon of clips settles into the index
Type behind a keyed subject	Sparkform, Jellyfish Scroll	B	Kartu Judul: giant title passes behind a cut-out character
Spotlight mask hover	Nike Hover (Ink Reveal locked)	A	A still reveals the reel under the cursor
One-number shelf / lineup	Shelf Hero, Runway Lookbook	A + B	The 57-episode index, the character lineup
Living portrait	Living Portrait	A + B	Aligned AI stills swapped on a WebGL sheet: characters page

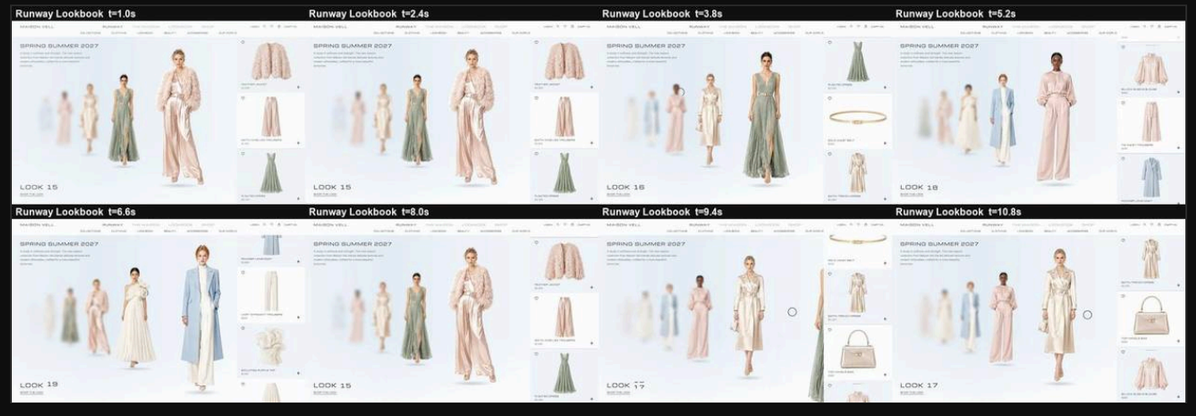


Priority items: Video Ribbon, Ink Reveal (locked), Hover Ink (locked), Living Portrait, Infinite Gallery (locked), Orvante, Reelmark, Shelf Hero



Video Ribbon built locally: ribbon flies in, lands as a grid (one free loop substituted)

Jellyfish Scroll: type passes behind the subject



Runway Lookbook: one-number lineup navigation

THEIR PROMPT ANATOMY (WE REUSE IT TO BRIEF OUR DESIGNERS)

01 Header: name + what it is in six words

02 What it is: scene, what moves, stack line

03 4 to 6 numbered rules that keep it coherent

04 Page basics: title, fonts, colour tokens

05 Media: exact URLs, size, duration, loop

06 Frame + unit: 1440x900 design frame, separate phone unit

07 Layout by region: coordinates, type, colour, verbatim copy

08 First frame and states

09 Timeline table: trigger, element, property, from → to, duration, easing, stagger

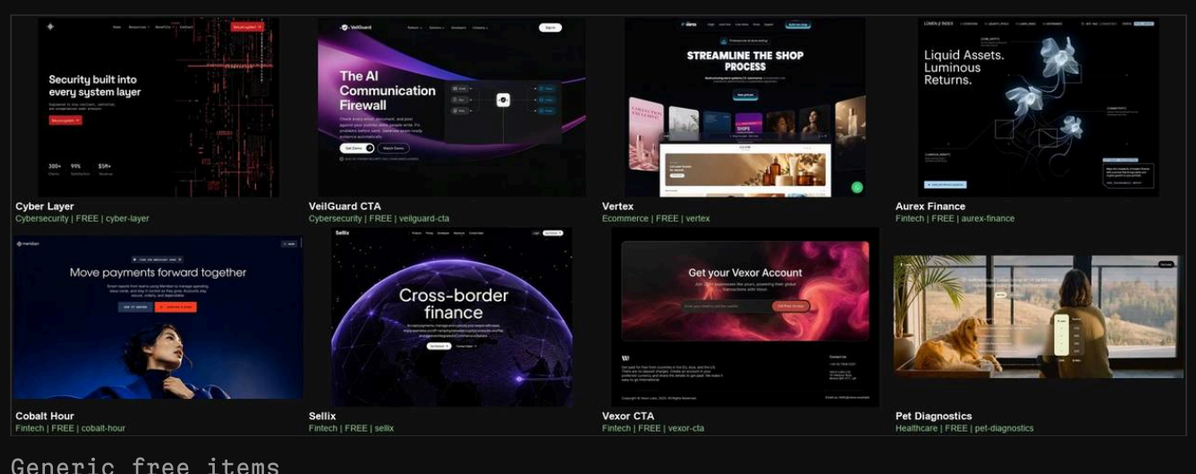
10 Interaction + reduced motion

11 Responsive behaviour

12 Bug scars (hard rules), then 4 to 6 acceptance checks at 1440 and 390

For kampanye we add: one line of positioning, territory tokens (A or B), a performance budget, the sound rule ("muted, nyalakan suara toggles") and the deny-list on the right.

THE AI-TEMPLATE LOOK TO AVOID



Generic free items

- Particle brains and orbs on black
- Glass / frosted cards everywhere
- Pastel-gradient SaaS cards, purple gradient buttons
- Stock chrome heads and cute mascots
- **The house formula** (about 30% of the free set): full-bleed video + centred serif headline + glass pill button

Background-loop library. We are an AI video studio, so we generate our own loops instead of using stock

09

Page anatomies from the inner-page crawl

18 production companies and studios, 67 full pages. The case page is complete with just film and text. Process blocks slot in as Drive material arrives.

CASE PAGE (KARYA)

01 Back to Karya

10

Two directions to build side by side

The original two territories. Both were built as mockups and rejected as not premium (section 13). Kept for the record.

A

Kamar Gelap

The studio as a darkroom: film black, red only as the safelight signal.

PALETTE	#0E0E0E · #F2F2F2 · red #FF3B30 · orange ≤1%
TYPE	Boska serif display + Martian Mono timecodes
HERO	Muted full-bleed reel, project rail at the bottom, "nyalakan suara"
SIGNATURE	A rail item grows into black theatre mode with sound
MOTION VERB	Cut like an edit
RISK	Close to many dark film sites; the logo and the red must carry the identity

ref: freshman.tv

B

KARTU JUDUL

Every project opens like a film's title card: a flat red field, then a cut to the film.

PALETTE	Red field #FF3B30 · ink #1A1A1A · paper #F2F2F2
TYPE	Condensed caps (Big Shoulders) + neutral grotesk
HERO	Red title card naming the film → cut to the muted reel; the title shrinks into the header
SIGNATURE	The title-card cut on hovers, case openers, page changes
MOTION VERB	Slam like a title card
RISK	Small white text fails on red; ink must be black

ref: ilcapoproduction.com

11 What I need from you

Your answers so far are logged in DECISIONS.md.

1	2	3	4	5
The hero: A or B?	**Pick 2–3 font pairings**	**Google Drive link**	**Contact page**	**r2.dev DNS override?**
Open both arrivals in the first section on a laptop (move the cursor) and a phone. Then: font combination confirmed as type lab 4?	From the top 6 in section 06 (e.g. 04 League Gothic for Kartu Judul, 07 Newsreader or 02 Gambarino for Kamar Gelap). The designers render those	Case material: briefs, BTS, finals. Who can share it?	Guided brief, one question per screen (Locomotive style), or one short form?	Your ISP blocks MotionSites' preview videos. A one-off DNS override (e.g. 1.1.1.1) lets me fetch the motion of the locked items. Skip if not worth it

12 Not done / caveats

- No designs or code yet. The repo is untouched (cloned to ~/Projects/kampanye.ai).
- Luxury red sites (Cartier, Louboutin, Ducati, Marni) blocked capture. One job opened them in your local Chrome profile, read-only.
- Some heroes were caught on a preloader, gate or cookie banner (listed per REPORT.md). MJZ is deliberately almost blank, and Iconoclast's video hadn't painted.
- Scores, premium ratings and 'best fit' lists are judgement calls from screenshots. The jury number is an estimate.
- Full reports: refs/*/REPORT.md · jury/kampanye.ai/scorecard.md · INVENTORY.md · DECISIONS.md

p

Pindai (rejected 3 Nov: the hook was written as copy)

Rejected: 'how did they make that' was meant as the reaction to the site, not as the headline, and the effect should not explain itself. Kept for the record. Your pick (H1) built as a working first screen with type-lab 4 (Bodoni Moda + Mona Sans). It shows the frame as it was made: pencil storyboard, then depth contours, then a brand-red scan sweeps from near to far and leaves the finished frame. Move the cursor (or tap on a phone) for a lens that shows the sketch underneath. The layer names are buttons that rescan to that layer. Free assets only: a frame from the released trailer plus a depth map made on our PC.

Open the live prototype

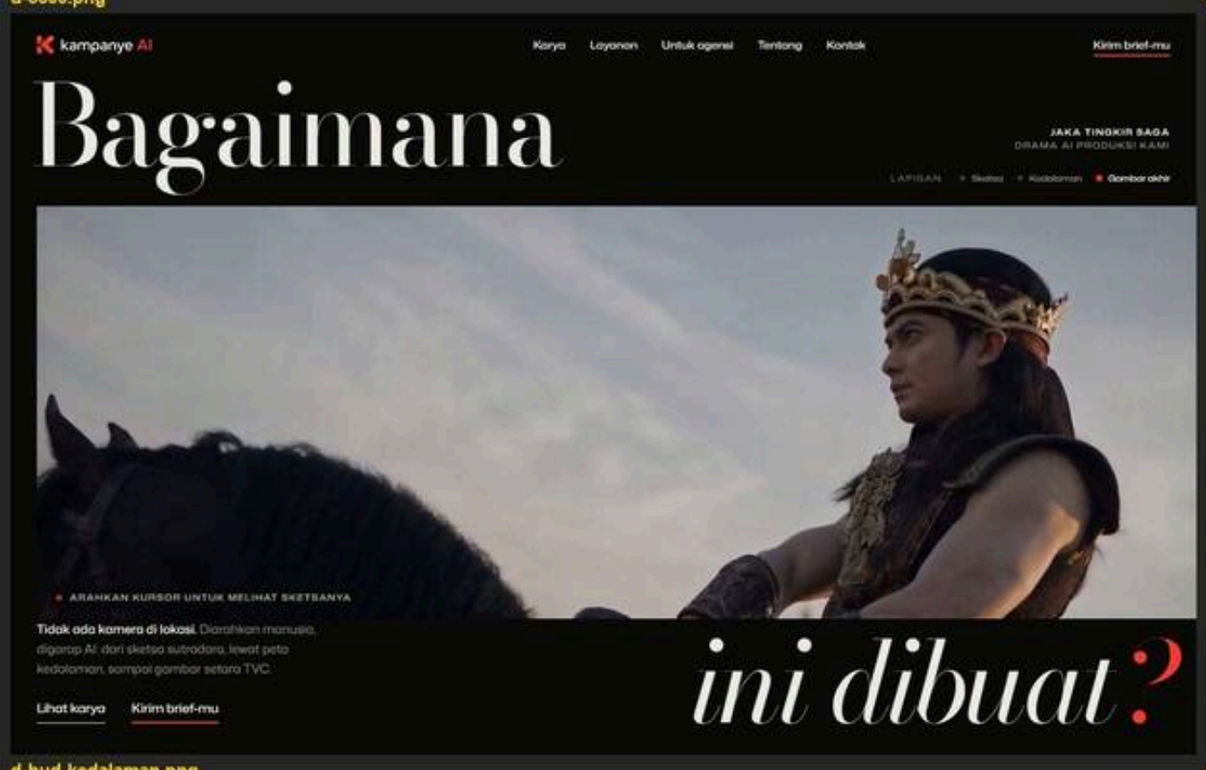
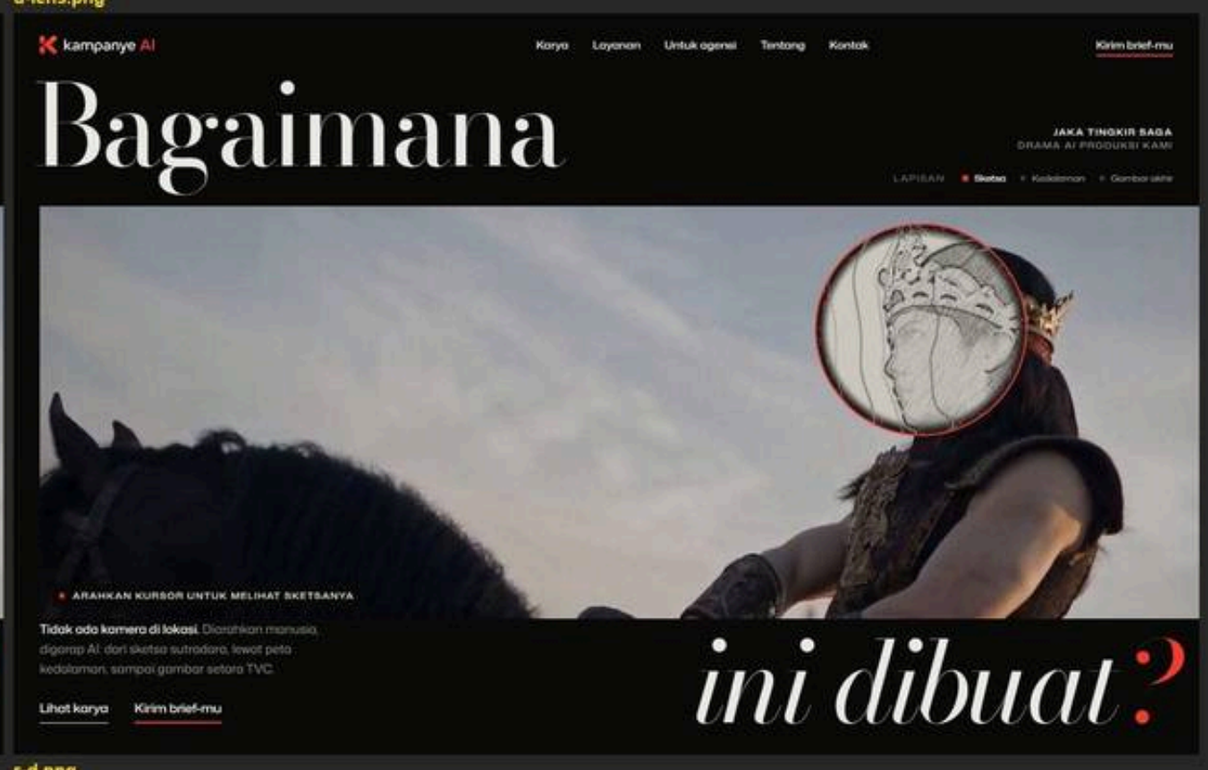
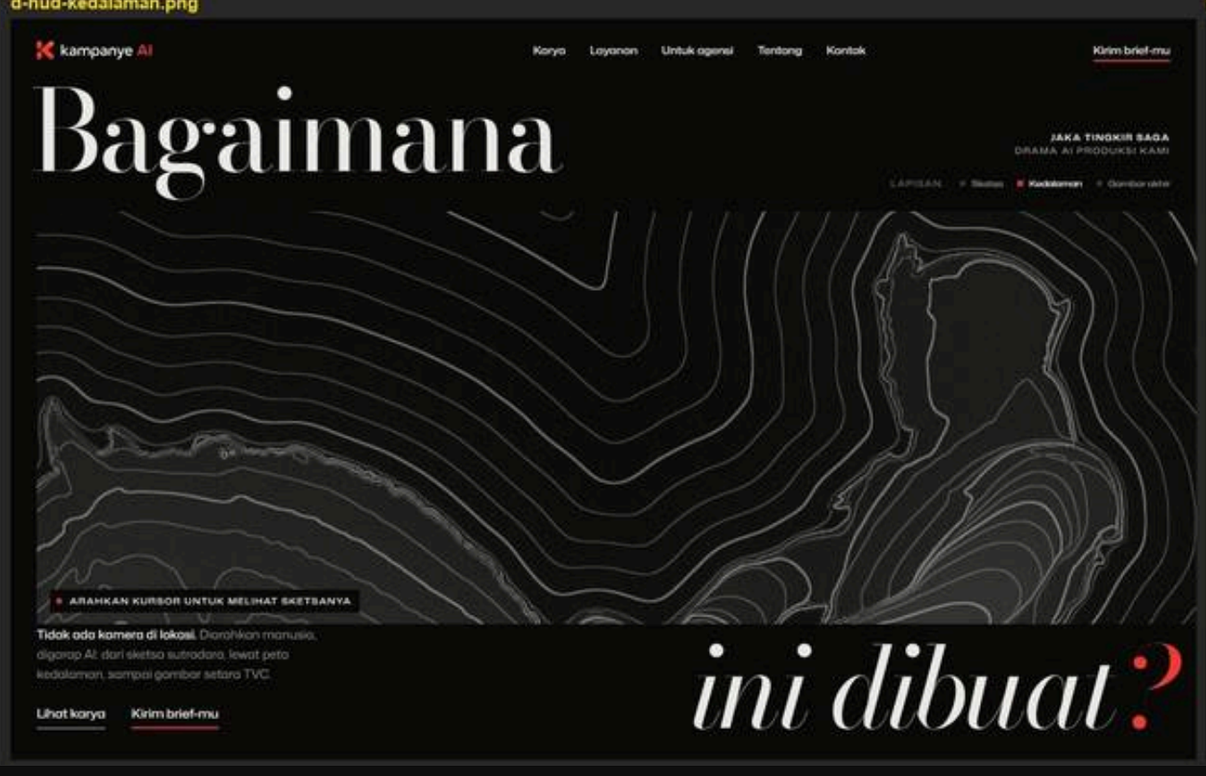
d-3500.png



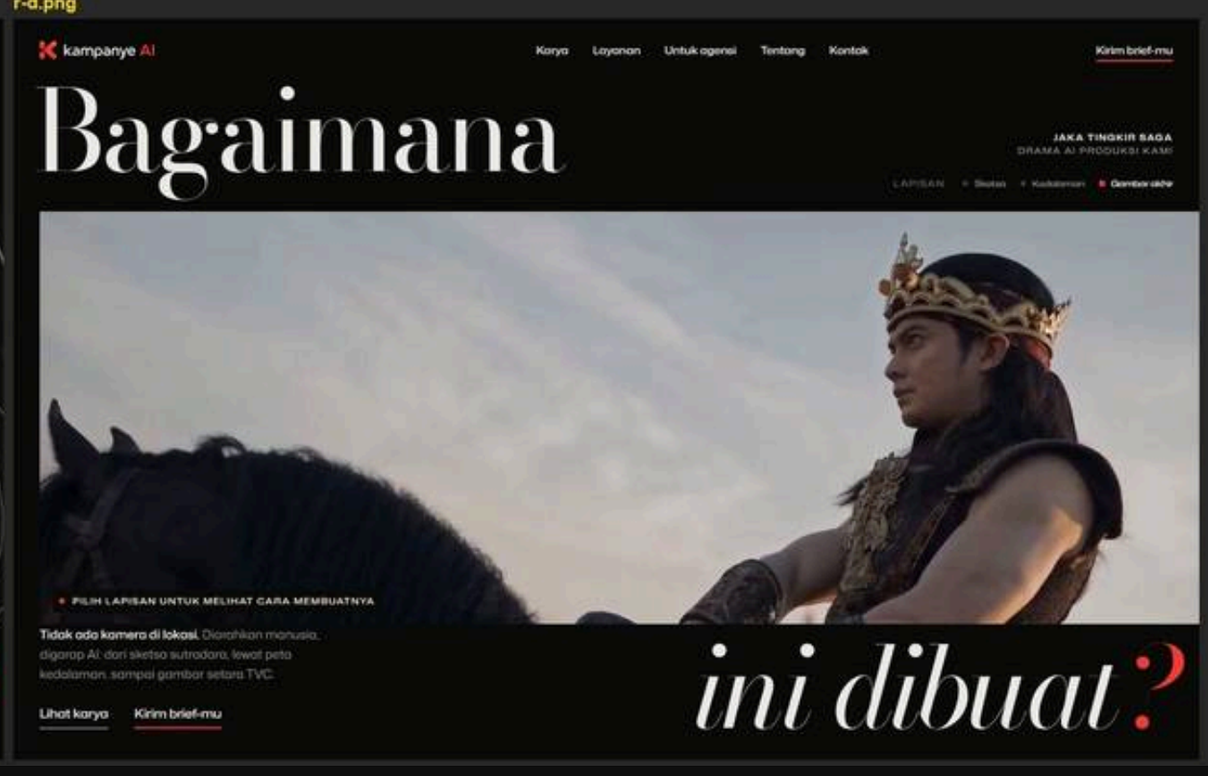
d-lens.png



d-hud-kedalaman.png



r-d.png



Desktop sequence: 0, 600, 1200, 2000, 3500 ms, the lens, the depth layer, reduced motion

Phone 390: the sequence, tap lens, menu, reduced motion

MEASURED

- No console errors, no overflow, fonts load, no digits or dashes in visible copy
- LCP is the poster image: 260 ms desktop, 348 ms with 4x CPU throttle (local)
- Frame rate hit the screen limit on our RTX PC, which says nothing about a mid-range phone. **Needs a real-device test.**
- Reduced motion and no-WebGL show the finished frame with all type

Open: red dots or line only (see 'Compare scan styles')? Who has a mid-range Android or iPhone for a frame-rate test? Release title: "Jaka Tingkir Saga"? (the trailer also shows "Bengawan Sore")

NEXT, WITH YOUR OK

- **Bespoke still** (one GPT Image, 2560x1440): the young king on the black horse at dusk, low three-quarter angle, horse head near left, king right third, quiet cloud-banded sky, faint far ridge or banners, no fire, no text. Sharper than the 720p trailer frame, with a real far plane for the scan.
- Then: depth map + cutout (free), same scripts. Cost: a single image generation, price confirmed before I run it.

13

Earlier mockups (rejected 3 Nov: not premium)

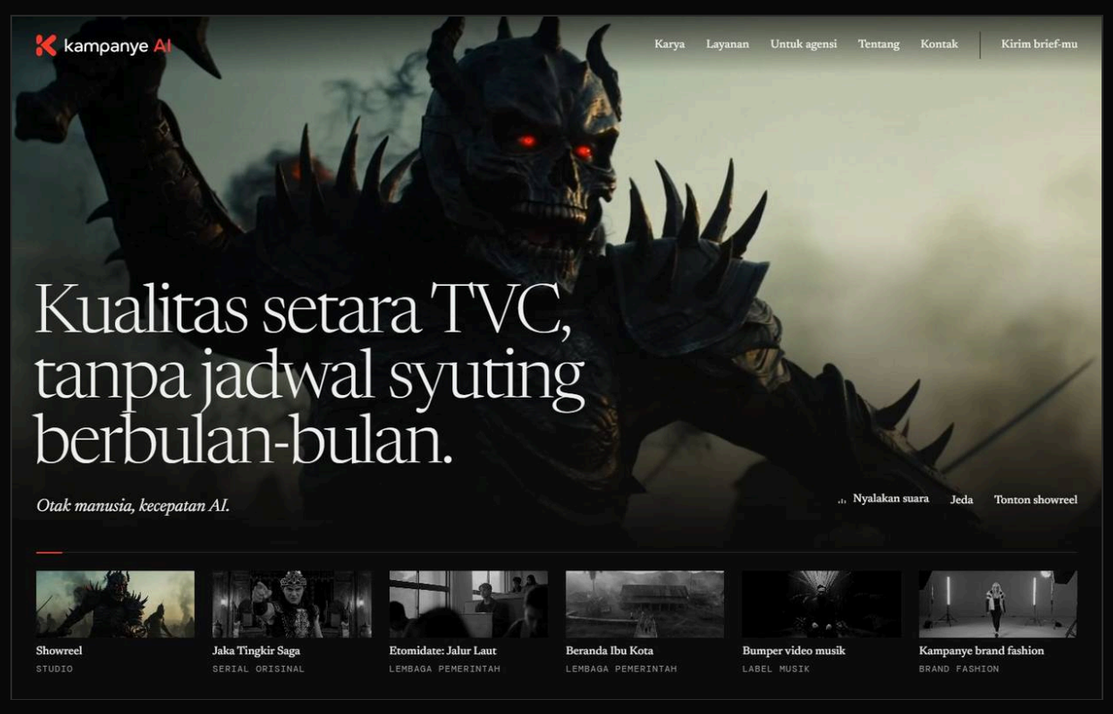
Rejected: type without craft, template layouts, game-trailer hero footage. Kept for the record. Working HTML mockups of the home page and the Jaka Tingkir case page, with our real footage, the vector logo and Bahasa copy. Open them on a laptop and a phone: the reel plays, the sound toggle works, and the signature moment runs. Placeholders are marked 'Nama menyusul'.

A

Kamar Gelap

The site is a dark screening room: the work is the only light, and red marks every decision.

Open the mock: home | Case page



Desktop, first screen

SIGNATURE	Click any film and the page goes dark except that frame, which grows into a theatre with sound. Esc or 'Nyalakan lampu' brings the lights back.
MOTION VERB	Cut like an edit: text cuts hard, only the film frame moves
TYPE	Newsreader (display + text, italic as subtitle voice) + DM Mono for labels
PALETTE	Film black #0E0E0E, ink #F2F2F2, red #FF3B30 only as signal
ORANGE	UI adds none; the warm footage puts orange at about 22% of the few saturated pixels
SELF-SCORE	7.8 (designer's own, not blind)

Screen recording of the working mock (headless browser)

Signature moment at 0 / 300 / 900 / 1600 ms

B

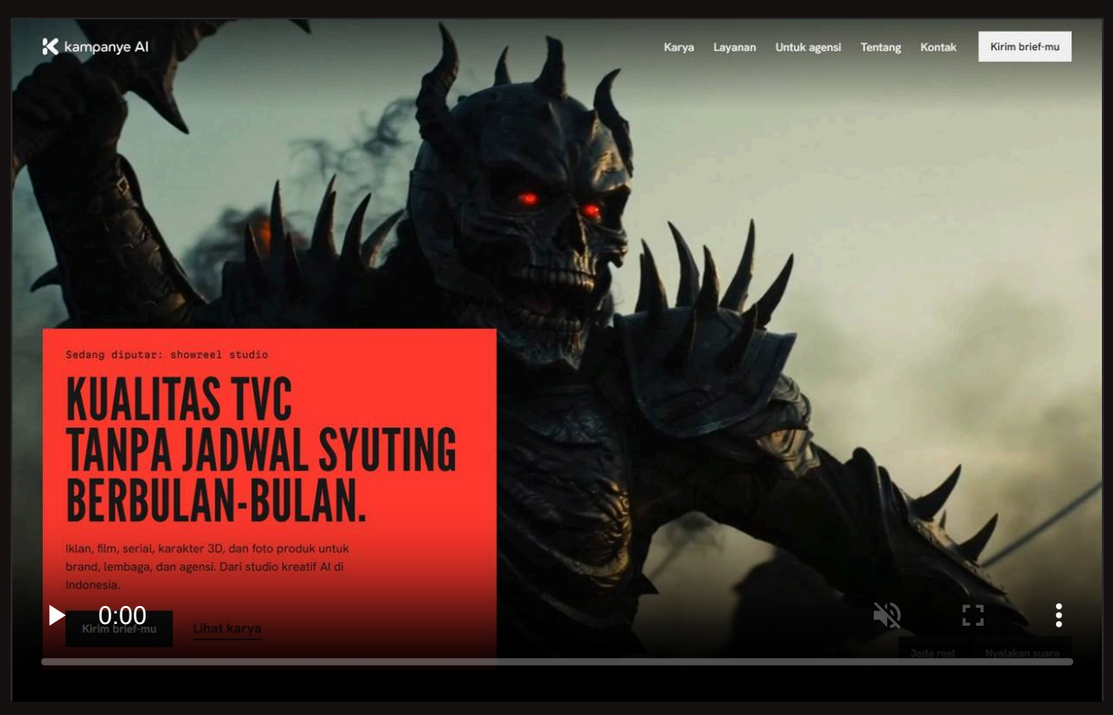
KARTU JUDUL

Every film, page and promise opens like a title card: a red card holds a beat, cuts to picture, and stays behind as a small red slab.

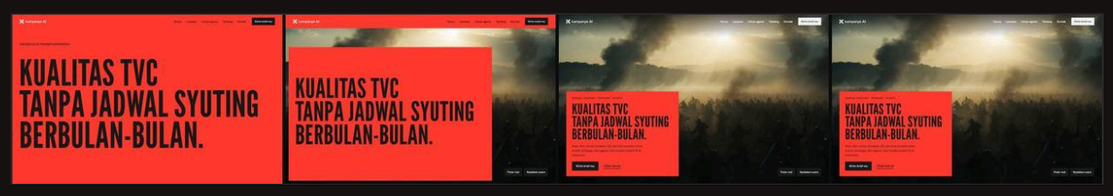
Open the mock: home | Case page

Desktop, first screen

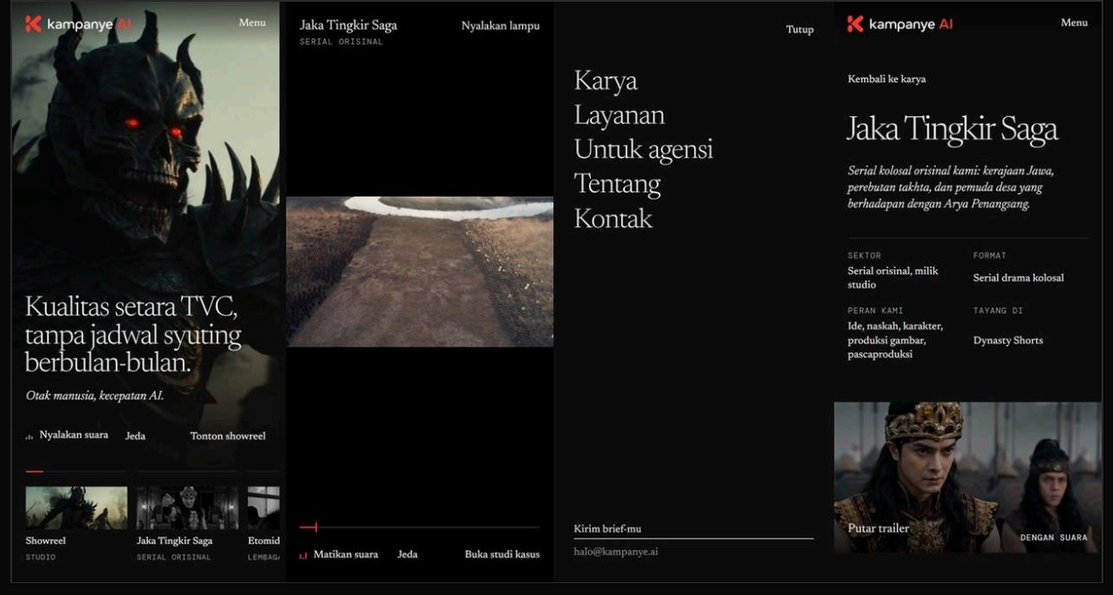
SIGNATURE	The page opens on a full red title card, holds, then collapses into a slab bottom-left while the muted reel plays. The same cut opens case pages and page changes.
MOTION VERB	Slam like a title card: fast in, held, cut out
TYPE	League Gothic (titles) + Hanken Grotesk (text) + Martian Mono (film metadata only)
PALETTE	Red field #FF3B30, ink #1A1A1A, paper #F2F2F2, square corners
ORANGE	0.6% on the settled hero, all from footage; one 8 px orange dot when sound is on
SELF-SCORE	7.75 (designer's own, not blind)



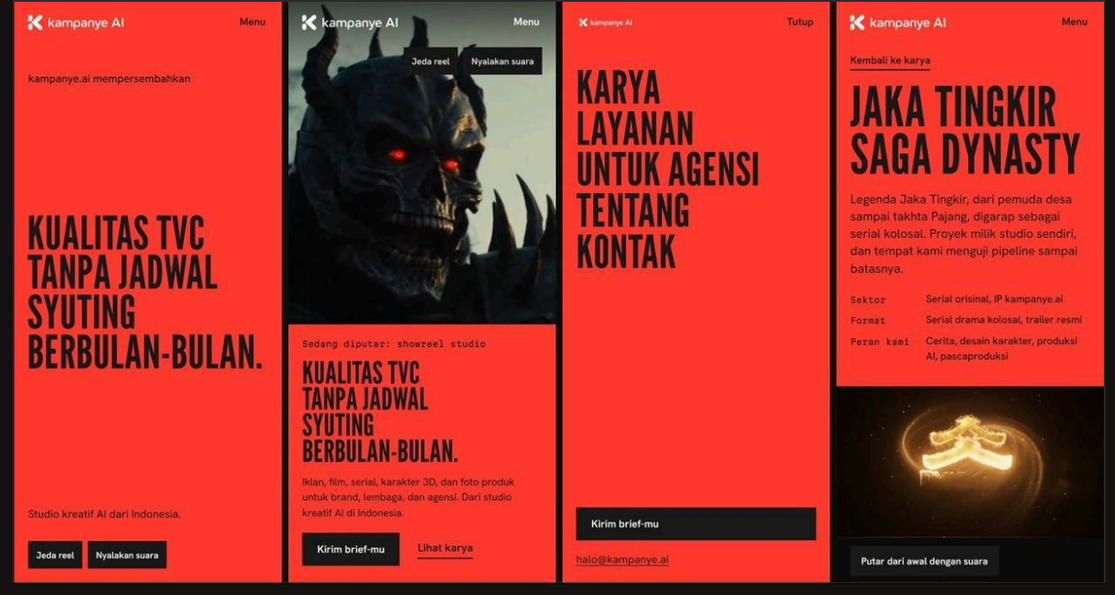
Screen recording of the working mock (headless browser)



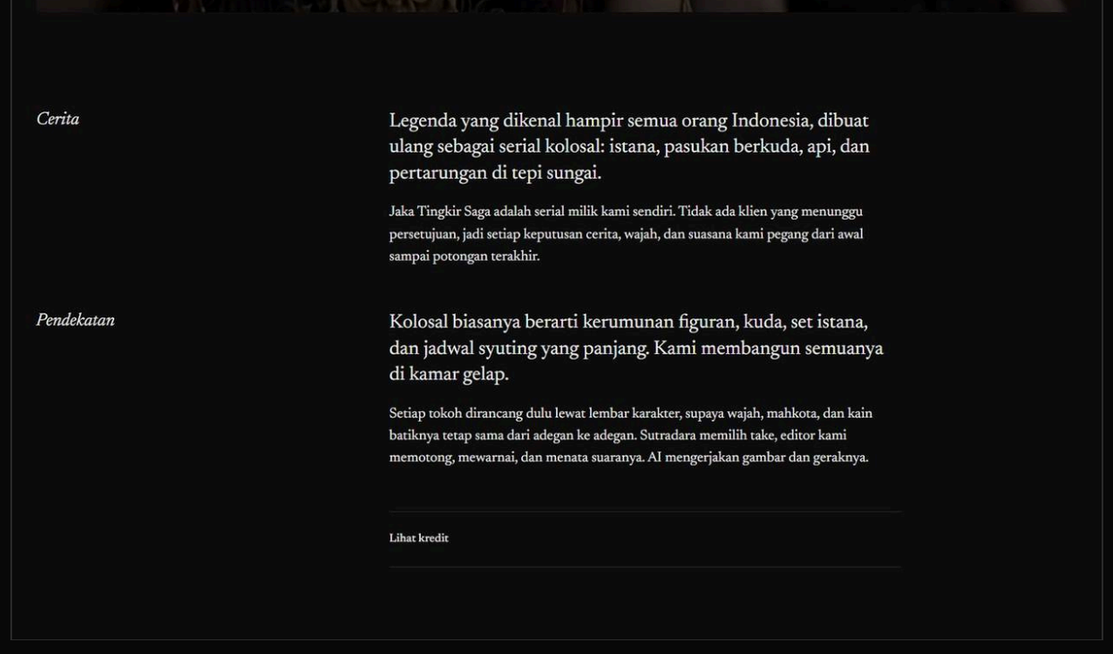
Signature moment at 0 / 300 / 900 / 1600 ms



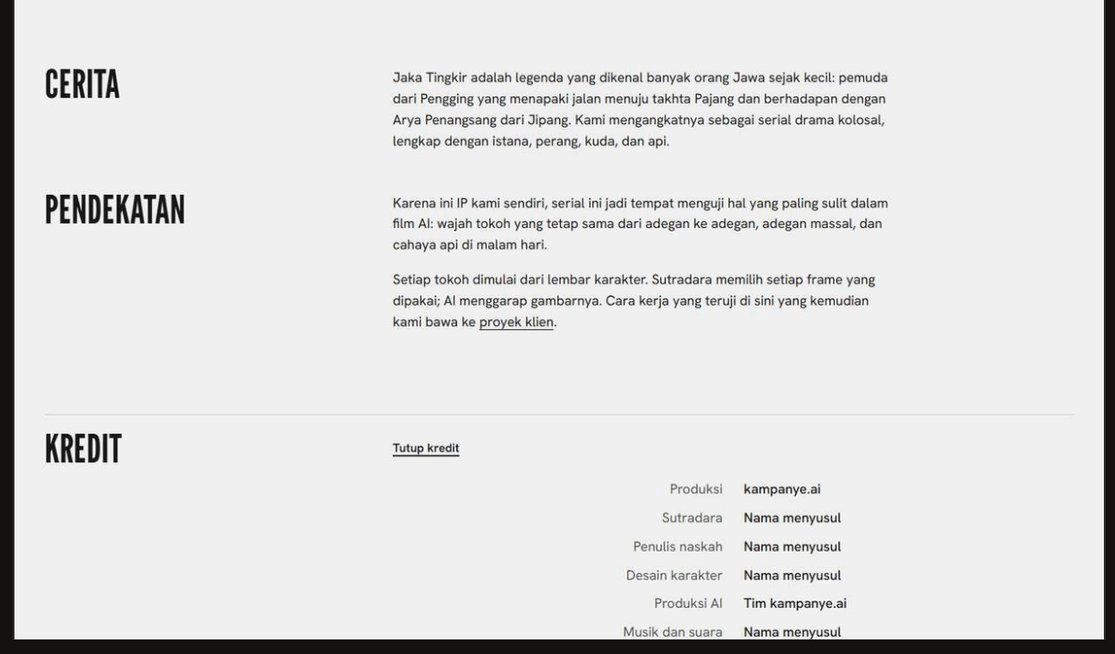
Phone 390: home, signature, menu, case



Phone 390: home, signature, menu, case



Case page, full length



Case page, full length

QUESTIONS THE DESIGNERS RAISED

01 Allow real film metadata (timecode, aspect ratio) as decoration, or keep none?

02 Official title: 'Jaka Tingkir Saga' or 'Jaka Tingkir Saga Dynasty'? Series or film? May we name Dynasty Shorts?

03 Which client names are cleared? Footage itself shows Polri / BNN identity: acceptable?

04 May we re-encode the 23 MB showreel for the web (about 3 to 4 MB)? Or cut a new montage across all the work for the hero?

05 Does the orange rule cover the films themselves, or only our design colours?

06 'Karakter 3D' contains a digit. Keep it as the service name?

07 Logo on red: B uses the pack's white reverse-on-red, because the black lockup's red 'AI' disappears on red. OK, or make an all-black variant?

08 Real credits and pipeline steps for the case page (now 'Nama menyusul')

Self-scores are the designers' own. A blind critic score comes after you pick a direction.
